

<<Handbook of Tilting >>

图书基本信息

书名：<<Handbook of Tilting Theory(倾斜理论)>>

13位ISBN编号：9780521680455

10位ISBN编号：052168045X

出版时间：2007-1

出版时间：Cambridge Univ Pr

作者：Hugel, Lidia Angeleri (EDT)/ Happel, Dieter (EDT)/ Krause, Henning (EDT)

页数：472

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## <<Handbook of Tilting >>

### 内容概要

Tilting theory originates in the representation theory of finite dimensional algebras. Today the subject is of much interest in various areas of mathematics, such as finite and algebraic group theory, commutative and non-commutative algebraic geometry, and algebraic topology. The aim of this book is to present the basic concepts of tilting theory as well as the variety of applications. It contains a collection of key articles, which together form a handbook of the subject, and provide both an introduction and reference for newcomers and experts alike.

书籍目录

1 Introduction 2 Basic results of classical tilting theory L. Angeleri Hügel, D. Happel, and H. Krause  
 REFERENCES3 Classification of representation-finite algebras and their modules T. Bruistle 1 Introduction 2  
 Notation 3 Representation-finite algebras 4 Critical algebras 5 Tame algebras REFERENCES4 A spectral  
 sequence analysis of classical tilting func-tors S. Brenner and M. C. R. Butler 1 Introduction 2 Tilting modules 3  
 Tilting functors, spectral sequences and filtrations 4 Applications 5 Edge effects, and the case  $t=2$  REFERENCES5  
 Derived categories and tilting B. Keller 1 Introduction 2 Derived categories 3 Derived functors 4 Tilting and  
 derived equivalences 5 Triangulated categories 6 Morita theory for derived categories 7 comparison of  
 $t$ -structures, spectral sequences 8 Algebraic triangulated categories and dg algebras REFERENCES6 Hereditary  
 categoriesH. Lenzing 1 Fundamental concepts 2 Examples of hereditary categories 3 Repetitive shape of the  
 derived category 4 Perpendicular categories 5 Exceptional objects 6 Piecewise hereditary algebras and Happel's  
 theorem 7 Derived equivalence of hereditary categories 8 Modules over hereditary algebras 9 Spectral properties  
 of hereditary categories 10 Weighted projective lines 11 Quasitilted algebras REFERENCES7 Fourier-Mukai  
 transforms L. Hille and M. Van den Bergh 1 Some background 2 Notations and conventions 3 Basics on  
 Fourier-Mukai transforms 4 The reconstruction theorem 5 Curves and surfaces 6 Threefolds and higher  
 dimensional varieties 7 Non-commutative rings in algebraic geometry REFERENCES8 Tilting theory and  
 homologically finite subcategories with applications to quasihereditary algebras I. Reiten 1 The Basic Ingredients 2  
 The Correspondence Theorem 3 Quasihereditary algebras and their generalizations 4 Generalizations  
 REFERENCES9 Tilting modules for algebraic groups and finite dimensional algebras S. Donkin10 Combinatorial  
 aspects of the set of titling modules L. Unger11 Infinite dimensional tilting modules and cotorsion pairs J. Trlifaj12  
 Infinite dimensional titing modules over finite dimensional algebras .Solberg13 Cotiting dualities R. Colpi and  
 K.R.Fuller14 Representations of finite groups and tilting J. Chuang and J. Rickard15 Morita theory in stable  
 homotopy theory B. ShipleyAppendix Some remarks concerning tilting modules and tilted algebras.  
 Origin.Relevance.Future C.M. Ringel
