内容概要

We are in the midst of an energy crisis. We're running out of heating oil and gasoline, tearing up our wilderness with hydro dams and damaging our health with nuclear power. And our production of energy may be the biggest cause of pollution in the world today. In *The Heat Is On* you'll find out where our energy comes from and why it is creating a problem. But you'll also discover that there are bright spots from the many plans to develop alternative clean energy sources, to the many ways we can all help, by using energy more thoughtfully and efficiently.

作者简介

Shelley Tanaka is an editor and author of several popular books for children.

书籍目录

PART 1 : What Is Energy, and Why Do We Use So Much of It? PART 2 : Where Does Energy Come From?
Fossil Fuels Water Power Nuclear Power Other Sources of Energy PART 3 : What Can We Do? Glossary Index
