<<人体解剖学>>

内容概要

Take a journey inside the mysterious world of our body, through pages of beautiful and detailed anatomical images. Analysis and summaries throughout the text will allow us to study the human body, from its posture and bipedal walk, to the development of the brain and speech and of those anatomical structures that characterize us and distinguish us from animals. Following this, other organs are discussed, including the elements that characterize them. Each topic is connected to another through a network of "references" which allow us to skip from one to the next as if it was a hypertext. We believe that this structure is the best way to learn and understand anatomy and the human body. It is, in fact, the transversal way of "reading" the body, which evokes the profound inter-relations between the components of this wonderful "organic machine" called the body.

书籍目录

DISCOVERING THE HUMAN BODY The Origins In Rome The Renaissance The revolution of Andrea Vesalio Toward modern anatomy SpecializationSIMILAR AND DIFFERENT Baby boy and baby girl Young boy and young girl Man and womanTHE CELLULAR BASIS OF ANATOMY Observational instruments Prepare and look at tissues Epithelial tissue Muscle tissue Muscular contraction Nerve tissue Transmission of nerve impulses Connective tissue Terms in anatomySKELETON AND MUSCLES THE SKELETON OR SKELETAL SYSTEM How the skeleton is divided The Bones The Joints The skull The spinal column The thorax Scapular girdle and the bones of the upper limbs Pelvis and bones of the lower limbsTHE MUSCLES OR THE MUSCULAR SYSTEM The skeletal muscles The involuntary muscles The muscles of the skull Dorsal muscles Trunk muscles Scapular muscles and upper limbs muscles Hip muscles and lower limbs muscles An typically human organ:the hand The key points of an erect posture:Hip knee footNERVESAND ENDOCRINE GLANDESTHE ENDOCRINE SYSTEMDIGESTION AND RESPIRATIONBLOOD CIRCULATION AND LYMPHATIC CIRCULATIONSKIN AND KIDNEYSREPRODUCTIONGLOSSARYANALYTICAL INDEXA CLOSER LOOKMEDICAL PAGES
