The LNCS series reports state-of-the-art results in computer science research, development, and education, at a high level and in both printed and electronic form. Enjoying tight cooperation with the R&D community, with numerous individuals, as well as with prestigious organizations and societies, LNCS has grown into the most comprehensive computer science resarch forum available.   The scope of LNCS, including its subseries LNAI, spans the whole range of computer science and information technology including interdisciplinary topics in a variety of application fields. The type of material publised traditionally includes.   -proceedings(published in time for the respective conference)   -post-proceedings(consisting of thoroughly revised final full papers)   -research monographs(which may be basde on outstanding PhD work, research projects, technical reports, etc.).

Commemorative Paper   Some Contributions by Zdzistaw PawlakKeynote Papers   Conflicts and Negotations   Hierarchical Machine Learning A Learning Methodology Inspired by Human Intelligence   Rough-Fuzzy Granulation, Rough Entropy and Image Segmentation   Towards Network AutonomyPlenary Papers   A Roadmap from Rough Set Theory to Granular Computing   Partition Dependencies in Hierarchies of Probabilistic Decision Tables   Knowledge Theory and Artificial Intelligence   Applications of Knowledge Technologies to Sound and Vision Engineering   A Rough Set Approach to Data with Missing Attribute Values   Cognitive Neuroscience and Web Intelligence   Cognitive Informatics and Contemporary Mathematics for Knowledge Manipulation   Rough Mereological Reasoning in Rough Set Theory: Recent Results and Problems   Theoretical Study of Granular Computing   Knowledge Discovery by Relation Approximation: A Rough Set Approach Rough Computing   Reduction-Based Approaches Towards Constructing Galois (Concept) Lattices   A New Discernibility Matrix and Function   The Relationships Between Variable Precision Value and Knowledge Reduction Based on Variable Precision Rough Sets Model   On Axiomatic Characterization of Approximation Operators Based on Atomic Boolean Algebras   Rough Set Attribute Reduction in Decision Systems   A New Extension Model of Rough Sets Under Incomplete Information   Applying Rough Sets to Data Tables Containing Possibilistic Information   Redundant Data Processing Based on Rough-Fuzzy   …
