

<<信息传递与组合学的一般理论>>

图书基本信息

书名：<<信息传递与组合学的一般理论>>

13位ISBN编号：9783540462446

10位ISBN编号：3540462449

出版时间：2006-12

出版时间：湖南文艺出版社

作者：Cai, Ning 编

页数：1124

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<信息传递与组合学的一般理论>>

内容概要

This book constitutes the thoroughly refereed research papers contributed to a research project on the 'General Theory of Information Transfer and Combinatorics' that was hosted from 2001-2004 at the Center for Interdisciplinary Research (ZIF) of Bielefeld University and also papers of several incorporated meetings thereof.

The 63 revised full papers presented were carefully reviewed and selected for inclusion in the book. The papers are organized in topical sections on probabilistic models, cryptology, pseudo random sequences, quantum models, statistics, probability theory, information measures, error concepts, performance criteria, search, sorting, ordering, planning, language evolution, pattern discovery, reconstructions, network coding, combinatorial models, and a problem section.

书籍目录

Introduction Rudolf Ahlswede Prom 60 to 66 Information Theory and Some Friendly Neighbors Ein Wunschkonzert Probabilistic Models 1 Identification for Sources 2 On Identification 3 Identification and Prediction 4 Watermarking Identification Codes with Related Topics on Common Randomness 5 Notes on Conditions for Successive Refinement of Information 6 Coding for the Multiple-Access Adder Channel 7 Bounds of E-Capacity for Multiple-Access Channel with Random Parameter 8 Huge Size Codes for Identification Via a Multiple Access Channel Under a Word-Length Constraint 9 Codes with the Identifiable Parent Property and the Multiple-Access Channel Cryptology - Pseudo Random Sequences 10 Transmission, Identification and Common Randomness Capacities for Wire-Tape Channels with Secure Feedback from the Decoder 11 A Simplified Method for Computing the Key Equivocation for Additive-Like Instantaneous Block Encipherers 12 Secrecy Systems for Identification Via Channels with Additive-Like Instantaneous Block Encipherer 13 Large Families of Pseudorandom Sequences of k Symbols and Their Complexity Part I 14 Large Families of Pseudorandom Sequences of k Symbols and Their Complexity - Part II 15 On a Fast Version of a Pseudorandom Generator 16 On Pseudorandom Sequences and Their Application 17 Authorship Attribution of Texts: A Review Quantum Models 18 Raum-Zeit und Quantenphysik Ein Geburtstagsstgndchen ffir Hans-Jiirgen Treder 19 Quantum Information Transfer from One System to Another One 20 On Rank Two Channels 21 Universal Sets of Quantum Information Processing Primitives and Their Optimal Use Information Measures-Error Concepts-Peerformance Criteria Search-Sorting-Ordering-Planning Language Evolution-Praatern Discovry-Reconstructions Network Coding Combinatorial Models Problem Section Author Index
