<<墙面设计WALL DESIGN>>

内容概要

"With the back to the wall," these individual design concepts could easily be overlooked these days. As a vertical section of the building, a wall structures the interior, organizes it into private and public areas, forms lines of sight and points of reference. Walls change the impression of the room and its volume; they elegantly guide visitors through the building or lead them into a dead end. In contrast to the facade that protects the building from influences of the weather, the inside wall enjoys the luxury of being configured freely. However, this freedom simultaneously demands a responsible approach to the design of wall surfaces: The quality of the room's effects stands or falls with the walls since they have a fundamental influence on the atmosphere of a space. Furthermore, the walls determine how people feel when they live within them. The design with extravagant wallpaper can transform a home into a shimmering palace with little effort and give your own four walls an individual character. With self-adhesive motifs like the wall stickers from "a better tomorrow," butterflies can settle in the big city and set temporary accents. The wall can even turn into a statement through quotes from the "Silbensalon".
