图书基本信息

书名: <<岩土材料质量分布与变形之间的相互作用原理>>

- 13位ISBN编号:9787030289049
- 10位ISBN编号:7030289048
- 出版时间:2010-1
- 出版时间:科学出版社
- 作者: Jingtao Wang 编
- 页数:128

版权说明:本站所提供下载的PDF图书仅提供预览和简介,请支持正版图书。

内容概要

Rock and soil are the major constituent materials of the lithosphere of the earth. They are also the most widely used engineering materials. Rock and soil exhibit some remarkable characteristics of deformation and strength behavior, such as the pressure sensitivity (or pressure dependency), shear dilatancy, dependency of stress path etc. The two phenomena of pressure sensitivity and shear dilatancy have long been known by people. However, their origin of generation is not explained rationally yet.

书籍目录

PrefaceChapter 1 Introduction to Continuum Mechanics 1.1 The definition of a continuum 1.2 Deformation 1.3 Stress 1.4 Velocity fields 1.5 The classical conservation laws and field equations 1.5.1 Lagrange and Euler descriptions of the motion of a continuum 1.5.2 The equation of continuity 1.5.3 The equations of motion 1.5.4 Moment of momentumChapter 2 Fundamentals of Thermodynamics 2.1 Introduction 2.2 Basic concepts of thermodynamics 2.3 Temperature and the zeroth law of thermodynamics 2.4 Energy 2.5 The first law of thermodynamics 2.6 The second law of thermodynamics 2.7 Reversible and irreversible processes 2.8 Entropy and Clausius-Duhem inequality 2.9 Internal variables and accompanying equilibrium stateChapter 3 Fundamental Characteristics of Deformation Behavior for Geotechnical Materials 3.1 Introduction 3.2 Pressure sensitivity 3.3 Shear dilatancy 3.4 Dependency of stress pathChapter 4 Constitutive Modeling for Geotechnical Materials 4.1 Introduction 4.2 The plastic potential theory 4.3 The approach based on the thermodynamics of irreversible processes 4.4 The critical state and critical state line 4.4.1 Critical state 4.4.2 Critical state lineChapter 5 The Principleof Interaction between Plastic Volumetric and Shear Strains 5.1 Background 5.2 The principle of interaction between plastic volumetric and shear strains 5.3 Effects of the plastic shear strain on plastic volumetric strains 5.4 Effects of the plastic volumetric strain on plastic shear strains 5.5 The physical meaning of the principle of interactionChapter 6 The Mechanism of Generation of Dependency of Stress Path and Critical State Line 6.1 The dependency of stress path 6.2 The rotational hardening 6.3 The critical state lineChapter 7 The Constitutive Equations for Geotechnical Materials 7.1 The objective of constitutive modeling 7.2 Quantitative representation of the interaction between plastic volumetric and shear strains 7.3 Thermodynamic variables and state potential 7.4 Dissipation functional 7.5 The constitutive equations for geotechnical materialsChapter 8 Damages of Engineering and Geotechnical Materials 8.1 The mechanism of damage of metals and some engineering materials 8.2 The damage of geotechnical materials 8.3 The description of damage evolutionChapter 9 The Numerical Method of Constitutive Modeling for Geotechnical Materials 9.1 Introduction 9.2 The numerical method of constitutive modeling 9.3 Plasticity-based models for clay and sand under different stress paths 9.4 Concluding remarksReferences
