<<中国城市化进程中的城市规划变革>>

内容概要

China's urbanization process is facing a number of major issues. To follow the "scientific concept of development" requirements, this book learns and summarizes the historical experience and lessons at home and abroad, and through a comprehensive analysis of multi-disciplinary research, explores the urban planning system reform.

This book focuses on building a government at all levels of urbanization and urban development planning control mechanism, a balanced regional development mechanisms, planning and administrative constraints and social supervision mechanisms. By means of narrative analysis, selforganization theory and new institutional Economics theories and methods, the author studies the content of urban planning system, laws. and direction of reform and innovation, and draws some useful new discussion and recommendations. Through al the changes in urban planning, the book aims to promote scientific and healthy development of China's urbanization.
