

<<矩阵计算>>

图书基本信息

书名：<<矩阵计算>>

13位ISBN编号：9787115208804

10位ISBN编号：7115208808

出版时间：2009

出版时间：人民邮电出版社

作者：Gene H. Golub, Charles F. Van Loan

页数：644

译者：袁亚湘

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

前言

The field of matrix computations continues to grow and mature. In the Third Edition we have added over 300 new references and 100 new problems. The LINPACK and EISPACK citations have been replaced with appropriate pointers to LAPACK. With key codes tabulated at the beginning of appropriate chapters. In the first Edition and Second Edition we identified a small number of global references: Wilkinson (1965), Forsythe and Moler (1967), Stewart (1973), Hanson and Lawson (1974) and Parlett (1980). These volumes are as important as ever to the research landscape, but there are some magnificent new textbooks and monographs on the scene. See the Literature section that follows. We continue as before with the practice of giving references at the end of each section and a master bibliography at the end of the book. The earlier editions suffered from a large number of typographical errors and we are obliged to the dozens of readers who have brought these to our attention. Many corrections and clarifications have been made. Here are some specific highlights of the new edition. Chapter 1 (Matrix Multiplication Problems) and Chapter 6 (Parallel Matrix Computations) have been completely rewritten with less formality. We think that this facilitates the building of intuition for high performance computing and draws a better line between algorithm and implementation on the printed page. In Chapter 2 (Matrix Analysis) we expanded the treatment of CS decomposition and included a proof. The overview of floating point arithmetic has been brought up to date. In Chapter 4 (Special Linear Systems) we embellished the Toeplitz section with connections to circulant matrices and the fast Fourier transform. A subsection on equilibrium systems has been included in our treatment of indefinite systems. A more accurate rendition of the modified Gram-Schmidt process is offered in Chapter 5 (Orthogonalization and Least Squares). Chapter 8 (The Symmetric Eigenproblem) has been extensively rewritten and rearranged so as to minimize its dependence upon Chapter 7 (The Unsymmetric Eigenproblem). Indeed, the coupling between these two chapters is now so minimal that it is possible to read either one first.

<<矩阵计算>>

内容概要

本书系统介绍了矩阵计算的基本理论和方法。

内容包括矩阵乘法、矩阵分析、线性方程组、正交化和最小二乘法、特征值问题、Lanczos方法、矩阵函数及专题讨论等。

书中的许多算法都有现成的软件包实现，每节后还附有习题，并有注释和大量参考文献。

本书可作为高等学校数学系高年级本科生和研究生的教材，亦可作为计算数学和工程技术人员的参考用书。

作者简介

Gene H. Golub, (1932-2007), 美国科学院、工程院和艺术科学院院士, 世界著名的数分析专家, 现代矩阵计算的奠基人, 生前曾任斯坦福大学教授。

他是矩阵分解算法的主要贡献者, 与William Kahan在1970年给出了奇异值分解 (Singular Value Decomposition, SVD) 的可行算法, 一直沿用至今。

他发起组织了工业与应用数学国际会议 (International Congress on Industrial and Applied Mathematics, ICIAM)。

书籍目录

1	Matrix Multiplication Problems	1.1	Basic Algorithms and Notation	1.2	Exploiting Structure	1.3
	Block Matrices and Algorithms	1.4	Vectorization and Re-Use Issues	2	Matrix Analysis	2.1
	Basic Ideas from Linear Algebra	2.2	Vector Norms	2.3	Matrix Norms	2.4
	Matrix Computations	2.5	Orthogonality and the SVD	2.6	Projections and the CS Decomposition	
	2.7	The Sensitivity of Square Linear Systems	3	General Linear Systems	3.1	Triangular Systems
	3.2	The LU Factorization	3.3	Roundoff Analysis of Gaussian Elimination	3.4	Pivoting
	Improving and Estimating Accuracy	4	Special Linear Systems	4.1	The LDMT and LDLT Factorizations	3.5
	4.2	Positive Definite Systems	4.3	Banded Systems	4.4	Symmetric Indefinite Systems
	Block Systems	4.6	Vandermonde Systems and the FFT	4.7	Toeplitz and Related Systems	4.5
	Orthogonalization and Least Squares	5.1	Householder and Givens Matrices	5.2	The QR	
	Factorization	5.3	The Full Rank LS Problem	5.4	Other Orthogonal Factorizations	5.5
	The Rank Deficient LS Problem	5.6	Weighting and Iterative Improvement	5.7	Square and	
	Underdetermined Systems	6	Parallel Matrix Computations	6.1	Basic Concepts	6.2
	Matrix Multiplication	6.3	Factorizations	7	The Unsymmetric Eigenvalue Problem	8
	Eigenvalue Problem	9	Lanczos Methods	10	Iterative Methods for Linear Systems	11
	Matrices	12	Special Topics	Index
