<<骨及骨关节疾病诊断学.第5卷>>

内容概要

The new millennium and right on schedule comes the fourth edition of Diagnosis of Bone and Joint disorders. This, then, is the third time I have revised this text since its initial publication in 1981, more than 2 decades ago. Each time I have begun work on a new edition, I believed incorrectly that my job would be easier because, I thought, how much information could possibly have been introduced in the 5 or 6 years that had elapsed since the previous edition? And each time, without exception, I have been surprised by the progress that has occurred with regard to the further understanding and improved diagnostic assessment of the many diseases that affect the musculoskeletal system. So now, 7 years after the publication of the third edition, the fourth edition is offered as clear evidence that much has been learned, new concepts have emerged, and "old facts" have been modified or eliminated altogether. I am often asked at the time of publication of a new edition precisely how much of the material is appearing for the first time. This is a difficult question to answer quantitatively. My educated guess is that 30 per cent of the information is new or has been modified significantly from that contained in the third edition, that the number of references has been expanded by 25 to 35 per cent (with emphasis given to pertinent recent publications), and that new illustrations represent 25 to 30 per cent of the total number appearing in this edition. With regard to the illustrative material, the new figures underscore the increasing importance of MR imaging as a vehicle for investigation of these diseases. The size of the fourth edition does not differ significantly from that of the last edition, although the number of volumes has been decreased by one. (You will note that each is somewhat heavier than in the past!) To be certain that this multivolume book did not become too large, I consulted extensively with the following changes.

<<骨及骨关节疾病诊断学.第5卷>>

书籍目录

VOLUME 1 SECTIONS Radiography and Related Diagnostic Techniques in the Evaluation of Bone,Joint,and Soft Tissue Diseases SECTIONS Imaging and Interventional Procedures of the Spine SECTIONS Imaging of the Postoperative Patient SECTIONS Basic Sciences of Musculoskeletal DiseasesVOLUME 2 SECTIONS Rheumatoid Arthritis and Related Diseases SECTIONS Connective Tissue Diseases SECTIONS Degenerative Diseases SECTIONS Crystal-Induced and Related Diseases SECTIONS Temporomandibular Manifestations of Articular Diseases SECTIONS Target Area Approach to Articular DiseasesVOLUME 3 SECTIONS Metabolic Diseases SECTIONS Endocrine Diseases SECTIONS XIV Infectious Diseases SECTIONS XV Traumatic DiseasesVOLUME 4 SECTIONS XVI Internal Derangements of Joints SECTIONS XVII Thermal,Iatrogenic,Nutritional,and Neurogenic Diseases SECTIONS XVIII Osteonecrosis and Osteochondrosis SECTIONS XIX Tumors and Tumor-like DiseasesVOLUME 5 SECTIONS XX Congenital Diseases SECTIONS XXI Diseases of Soft Tissues and Muscles SECTIONS XXII Miscellaneous DiseasesIndex
