<<大众传播动力学>>

前言

Some of the impetus for this ninth edition of Dynamics came from my own media behavior. In the time span between the eighth and ninth editions I have bought the following items: a digital video recorder (DVR), satellite radio, a camera phone, an iPod, and a lap-top computer equipped for wireless. It eventually dawned on me that my individual purchasing behavior mirrored larger trends that were happening in the media world.

(Of course, it dawned on me much more quickly that keeping up with the latest technologies can be expensive, but that's another story.) The larger trends I refer to are discussed in Chapter I of the ninth edition: convergence, disintermediation, increasing audience control, and media mobility. The camera phone is a good example of device convergence—one device does the work of two. With the iPod I can purchase and download songs from iTunes, and there's no need to visit a record store—disintermediation at its basic level. The digital video recorder and satellite radio give more control over my media exposure. I can record programs on the DVR and watch them on my schedule, not the networks. If I don't want to see commercials, I can fast-forward through them. Satellite radio gives me dozens of commercial-free music channels to listen to. I am no longer chained to the tight playlists and commercial interruptions of local radio stations. The iPod lets me program my own music and take it with me. The laptop keeps me linked to the Internet when on the go and can also play DVDs to help pass the time on long airline trips. All the above demonstrates once again that the word dynamic in the title of this ninth edition has never been more appropriate. It also demonstrates that it's important for today's students to know something about the new media environment that will confront them when they graduate, no matter what their career direction.

As in past editions, this edition of Dynamics recognizes that the introductory course in mass media generally attracts two general types of students. One type ultimately wants to pursue a career in some branch of the media. These students are more interested in the structure, organization, and operations of the media. The other type will pursue a career in some other field but will still become consumers of media content. These students are more interested in developing what is termed "media literacy," the ability to analyze and critically evaluate information presented in a variety of media and to understand the contexts within which media are produced, distributed, and consumed. One of the original goals for the first edition of Dynamics and for its successors was to present a thorough and up-to-date treatment of the various media and media-related topics that would be helpful to aspiring professionals and also foster the development of media literacy among those who chose other careers. It is hoped that the ninth edition also fulfills this goal.

书籍目录

第九版前言 第一部分 大众传播的本质与历史 第1章 传播：大众与其他形式 第2章 研究大众传播的视野 第3章 历史与文化背景 第二部分 媒介 第4章 报纸 第5章 杂志 第6章 图书 第7章 广播 第8章 电影 第9章 电视 第10章 互联网与万维网 第三部分 特定媒介职业 第11章 新闻采集与报道 第四部分 大众媒介规制 第12章 常规控制：法律、法规和规制 第13章 道德伦理和其他非正式控制 第五部分 媒介影响 第14章 大众传播的社会影响

章节摘录

Source Until the advent of the Internet and the Web, the source in the traditional masscommunication situation was typically a group of individuals who acted in predetermined roles in an organizational setting. In other words, mass communication was the end product of more than one person's efforts. For example, think about how a newspaper is put together. Reporters gather news; writers draft editorials; a cartoonist draws an editorial cartoon; the advertising department lays out ads; editors lay out all these things on a sample page; technicians transfer this page to a master; other technicians print the final paper; the finished copies are given to the delivery staff; and, of course, behind all this is a publisher who has the money to pay for a building, presses, staff, trucks, paper, ink, and so on. This institutional nature of mass communication has several consequences that we will consider later in this book. The advent of Internet-based mass communication changes this situation. Thanks to the World Wide Web, one person can become a mass communicator. The full implications of this change may take some time to become clear. For both traditional and Internet-based mass communication, the source usually has little detailed information about its particular audience. The author of a Web site has little detailed information about the individual people who visit the site. Traditional mass media may have collective data, but these are typically expressed as gross audience characteristics. The newspaper editor, for example, may know that 40 percent of the readers are between 25 and 40 years old and that 30 percent earn between \$20,000 and \$50,000, but the editor has no idea about the individual tastes, preferences, quirks, or identities of these people. They are an anonymous group, known only by summary statistics.
