## 第一图书网, tushu007.com <<多媒体通信系统>>

### 图书基本信息

- 书名: <<多媒体通信系统>>
- 13位ISBN编号:9787302069706
- 10位ISBN编号:7302069700
- 出版时间:2003-8
- 出版时间:清华大学出版社
- 作者:拉奥
- 页数:545

版权说明:本站所提供下载的PDF图书仅提供预览和简介,请支持正版图书。

### 前言

<<多媒体通信系统>>

The past years have seen an explosion in the use of digital media. Industry is making signifi cant investments to deliver digital audio, image and video information to consumers and customers. A new infrastructure of digital audio, image and video recorders and players; onlineservices and electronic commerce is rapidly being deployed. At the same time, major roora-tions are converting their audio, image and video archives to an electronic form. Digital mediaoffer several distinct advantages over analog media. The quality of digital audio, image and videosignals is higher than that of their analog counterparts. Editing is easy because one can access theexact discrete locations that need to be changed. Copying is simple with no loss of fidelity. A copyof digital media is identical to the original. Digital audio, image and video are easily transmitted across networked information systems. These advantages have opened up many new possibilities. Multimedia consists of Multimedia data + Set of interactions. Multi-media data is informally considered as the collection of three Ms: multisource, multitype and multiformat data. The interactions among the multimedia components consist of complex rela-tionships without which multimedia would be a simple set of visual, audio and other data. Multimedia and multimedia communication can be globally viewed as a hierarchical sys-tem. The multimedia software and applications provide a direct interactive environment forusers. When a computer requires information from remote computers or servers, multimediainformation must travel through computer networks. Because the amount of informationinvolved in the transmission of video and audio can be substantial, the multimedia informationmust be compressed before it can be sent through the network in order to reduce the communi-cation delay. Constraints, such as limited delay and jitter, are used to ensure a reasonable videoand audio effect at the receiving end. Therefore, communication networks are undergoing con-stant improvements in order to provide for multimedia communication capabilities.

#### 内容概要

本书首先介绍了多媒体通信的基本元素、数字视频、信号处理的基本方法,各类多媒体通信网络及协议,并重点介绍了多媒体通信的一系列国际标准。

该书的特点是对近年新涌现的新技术、新标准介绍得较全面与细致,但同时又不失基本的原理。 本书可作为通信、计算机、电子等专业的本科或研究生教材,也适合从事相关专业的工程师作为参考 使用。

# <<多媒体通信系统>>

### 作者简介

作者:(美国)拉奥(K.R.Rao)(美国)博伊科维奇(Zoran S.Bojkovic)(美国)米洛瓦诺维奇(Dragorad A.Milovanovic) K. R. Rao, is Professor of Electrical Engineering at the University of Texasat Arlington. He has authored or co-authored several additional leading textsin the field, including Techniques and Standards for Image/Video/AudioCoding, and Packet Video Communications over ATM Networks (PrenticeHall). In 1975, with two other researchers, he introduced the iscreteCosine Transform, one of today's most powerful digital signal processingtechniques. He is a Fellow of the IEEE.Zoran S. Bojkovic, received his Ph.D. degree in electrical engineeringfrom the University of Belgrade, Yugoslavia, Faculty of Electrical Engi-neering. He is currently a professor of electrical engineering at the Univer-sity of Belgrade. He has taught a wide range of courses in communicationnetworks and signal processing and supervised postgraduate tudentsworldwide. He has published 15 textbooks and more than 300 papers ininternational books, in peer-reviewed journals and conference proceedings. He is also an active reviewer and a member of the Scientific committee of numerous journals and conferences, and serves as chairman for international conferences, symposiums and workshops. He has conducted workshops/tutorials on multimedia worldwideand participated in many communication, scientific, and industrial projects. He is a member of IEEE Communication Society and EURASIP. Dragorad A. Milovanovic, received the Dipl. Electr. Eng. and Master of Science degree from the University of Belgrade, Yugoslavia Faculty of Engineering. From 1987 to 1991, he was a Research Assistant at the Department of Electrical ngineering, where his research interest includes analysis and design of digital communications systems. He has beenworking as R&D engineer for DSP software development in digital television industry. Also, he is serving as a consultant for developing standardbased and secure solutions for media coding, streaming and distribution. He has participated in numerous scientific projects and published more than 150 papers in international journals and conference proceedings.

### 书籍目录

<<多媒体通信系统>>

RrefaceAcknowledgmentsList of AcronynsChapter1 Multinedia Communications 1.1 Introduction 1.2 Multimedia Communication Model 1.3 Elements If Multimedia Systems 1.4 User Repuirements 1.5 Network Repuirements 1.6 Pacdket Transfer Conept 1.7 Multimedia Repuirements and ATN Networkd 1.8 Multimedia Terminals 1.9 Concludyng RemarksChapter2 Audio-Visual Integration 2.1 Introduction 2.2 Media Interaction 2.3 Bimodality of Human Speech 2.4 Lip Reading 2.5 Speech-Driven Talking Heads 2.6 Lip Synchronization 2.7 Lip Tracking 2.8 Audio-Visual Mapping 2.8.2 HMM for Audio-to-Visual Conversion 2.8.1 Classification-Baced Conversion 2.8.3 Audio and Visual ontegration for Lip-Reading Applications 2.8.4 Audio-Visual onformation 2.8.5 Pattern-Recognition Strategies 2.8.6 Integration Strategy 2.9 Bimodal Person Preprocessing Verification 2.10 Joint Arkio-Video Coding 2.11 Concluding RemarksChapter3 Multimedia Processing in Communications 3.1 Introduction 3.2 Digital Media 3.3 Signal-Processing Elements 3.4 Challenges of Multinedia Intormation Processing 3.4.1 Pre and Poctprocessing 3.4.2 Speech, Audio and Acoustic Processing for Multimedia 3.4.3 Video Sigmal Processing 3.4.4 Content-Baced Image Retrieval **Texture-Baces Methods** Shape-Baced Methods Color-Based Methods 3.5 Perceptual Coding of Digital Audio Signals 3.5.1 General Perceptual Audio-Coding 3.5.2 Review of Psychoacoustic Fundamentals Absolute Threshold If Hearing Architecture **Critical Band Frepuency Analysis** Simultaneous Maskung and the Spread of Madking Temporal Masking PE 3.6 Transform Audio Coders 3.6.1 Optimum Coding in the Frepuency Domain 3.6.2 Perceptual Transform Coder 3.6.3 Hybrid Coder 3.6.4 Transform Coding Using DFT Interblock Redundancy 3.6.6 Differential Perceptual 3.6.5 ADPEC SAudio Coder 3.6.7 DFT Noise Substitution 3.6.8 DCT with Vector Quantization 3.6.9 MDCT 3.6.10 MDCT with VQ 3.7 Audio Subband Coders 3.7.1 Wavelet Decompositions 3.7.2 DWT-based Subbnd Coders 3.8 Speech Coder Attributes ..... Chapter4 Distributes Multimedia SystemsChapter5 Multimedia Communication StandardsChapter6 Multimedia Communications Across NetworksReferencesIndexAbout the Authors
