# 第一图书网, tushu007.com <<连续介质物理中的双曲守恒律 (精装>>

#### 图书基本信息

书名: <<连续介质物理中的双曲守恒律 (精装)>>

- 13位ISBN编号:9787302102038
- 10位ISBN编号:7302102031
- 出版时间:2005-1
- 出版时间:清华大学
- 作者: CONSTANTINE M.DAFERMOS
- 页数:443

版权说明:本站所提供下载的PDF图书仅提供预览和简介,请支持正版图书。

#### 内容概要

The seeds of Continuum Physics were planted with the works of the natural philosophers of the eighteenth century, most notably Euler, by the mid-nineteenth century, the trees were fully grown and ready to yield fruit. It was in this environment that the study of gas dynamics gave birth to the theory of quasilinear hyperbolic systems in divergence form, commonly called "hyperbolic conservation laws"; and these two subject have been traveling hand-in-hand over the past one hundred and fifty years. This book aims at presenting the theory of hyperbolic conservation laws from the standpoint of its genetic relation to Continuum Physics. Even though research is still marching at a brisk pace, both fields have attained by now the degree of maturity that would warrant the writing of such an exposition.
