<<纳米结构生物材料>>

内容概要

Nanostructured materials with designed biofunctions have brought about rapid and significant changes in materials science. Nanostructured Biomaterials provides up-to-date reviews of different methods for synthesizing new types of such materials and discusses their cutting edge technological applications. The reviews mainly focus on potential applications of nanostructured materials in biology and the medical sciences. The book is of general interest to a broad audience of graduate students and researchers active in chemistry, materials science, engineering, biology, and physics. Dr. Junbai Li is a professor at the National Center for Nanoscience and Technology and the Institute of Chemistry, Chinese Academy of Sciences, China.
