<<余杭义桥汉六朝墓>>

内容概要

The Yiqiao cemetery (N 30 ° 17 ' 40 " , E 119 ° 54 ' 07 ") is 4 km northwest of the Yuhang Town in western Yuhang District , Hangzhou City , Zhejiang Province , and 2 . 5 km north of the Tiaoxi Spring , between the Tianmushan Mountain in its west and south , and the plain area in its east . It is on the slopes of several small hills including the Sheshantou hill , the Guojiatou hill and the Wangjiashan hill , with the Yiqiao Village in its east , the No . 15 provincial highway in its north , the Yangmeiling and Xin ' anqian Villages in its west and the Ahan Village in its south . The hills which are 4 to 28 meters above sea level were covered by tea trees before but now have been left uncultivated due to the local industrial development . In April 2007 , ancient burials were unearthed during the construction of the Yuhang Industry Development Limited Company . After signing an agreement with the developer , the Hangzhou Municipal Institute of Cultural Relics and Archaeology and the Yuhang District Museum organized a cooperative archaeological team and conducted a salvage excavation from May 22nd to July 10th , during which 64 burials had been discovered in an area of 1 500 sq meters . The burials include 1 of the pre—Qin period , 47 of the Han Dynasty , 13 of the Six Dynasties , 2 of the Song Dynasty and 1 of the Qing Dynasty . Totally 522 pieces(sets) of artifacts were unearthed . Besides , 63 pieces of artifacts probably from the burials had been collected . This monograph is a detailed report on the 60 burials of the Han Dynasty and the Six Dynasties . Information of the other four burials is in the appendix . Collected artifacts of different periods are described after the reports of the burials of their related periods . The 60 burials of the Han to the Six Dynasties periods can be divided into two types : earth—shaft burials which are relatively well preserved , and the brick—chamber burials many of which had been looted long ago . The earth—shaft burials can be further divided into two sub—types : the rectangular—shaped burials and the handle—knife—shaped burials . Some shafts are wider and some are narrower . The brick—chamber burials are rectangular—shaped , 凸—shaped , handle—knife—shaped or T—shaped . Some have front and back chambers . Burial offerings in the earth—shaft burials are relatively larger in number and more various in types comparing with those in the brick—chamber burials . Totally 406 pieces(sets) of ceramic , porcelain , bronze , iron , silver , stone and glass offerings were unearthed from the 60 burials . Ceramic objects take the highest percentage , followed by porcelain objects and bronze / iron objects . The 321 ceramic objects (79 . 1 % of the total artifacts) are mainly gray—brown or gray—green in color and green—yellow glazed . They obviously belong to the green—glaze tradition of the Southern China . Most of them were hand—made , some with the help of moulds , and wheel mended . Main surface decoration

<<余杭义桥汉六朝墓>>

include the string—pattern and curved flourish design . Some of them are imitatio of bronze ritual vessels . Some might have been articles for daily use , some were specially made as burial offerings . Sixteen bronze mirro and two iron ding鼎tripods were found in the burials . Only two out of the 60 burials have direct stratigraphic relationships and none of them have artifacts with accurate date .

Mainly based on the structures of the burials and typological research on burial offerings , we divided the burials into eight phases : phase dating to the early Western Han , phase dating to the Middle Western Han , phase dating to the Late Western Han , phase IV dating to the Xin Mang新莽period , phase V dating to the Early Eastern Han , phase VI dating to the Middle and Late Eastern Han . phase VII dating to the Western Jin晋and phase dating to the Eastern Jin . Some rules can be recognized from the distribution of burials . Seventeen earth—shaft burials are located on the slopes of the hills near Guojiatou in the north , while nine are on the slopes of the hills near Sheshantou in the south . It seems that earlier burials are usually higher and later burials have kept moving down slope . Nineteen brick—chamber burials are on the slopes near Guojiatou , while 17 of them are on the slopes near Sheshantou . Significantly , ten of the 21 Eastern Han brick—chamber burials concentrated around Sheshantou . Eight of the nine Western Jin burials are on the western top of Sheshantou . Two of the four Eastern Jin burials are on the eastern top of Sheshantou . Eastern Han brick—chamber burials are usually on the middle slope , while those of the Six Dynasties are usually near the top . Based on the excavation , we know that these hills had been used as burial ground as early as in the Warring State period . The small population size resulted in the small number of burials . This area had become an important cemetery during the Han and the Six Dynasties . The earliest burials of this period are on the northern slopes of Guojiatou . From the Eastern Han , burials had gradually moved southward to the southern slopes of Guojiatou and Sheshantou . All the earth—shaft burials are east—west orienting , while most of the brick—chamber burials are east or north orienting . It seems that orientation of a burial has close relationship with its micro—landscape—most of the burials orienting to open area . Burials of the same period and at the same location usually headed to the same direction . Passage slope , ercengtai二层台platform of filled earth , ercengtai platform of untouched earth , stone supporte and earth mound had been found in or above some earth—shaft burials . Some burials are under the same earth mound , and some burials have more than one dead . In Han Dynasty burials with more than one dead , there are secondary buried individuals who might have died earlier and been moved from their original burials . Niches were common in the brick —chamber burials of the Western Jin . The largest length and width of earth—shaft burials are 4.5 and 3 mete, while those of the

<<余杭义桥汉六朝墓>>

brick—chamber burials are 6 and 5 mete. In other words, all the burials are middle or small in size. The structure, quantity and quality of burial offerings also indicate that this area is the cemetery for common people. Both the structure and style of burial offerings demotrate the increasing influence of the Han culture which then developed to the Jin culture. Although local cultural elements can be recognized in the burials of the Han Dynasty, they had been gradually taken place by the Han cultural elements. We can find the historical background of this takeover in ancient texts. In summary, the Yiqiao cemetery had been the burial ground for common people. The burials with significant local characteristics are large in number and cover a complete chronological sequence. They are important for our research on mortuary practice in Southern China, especially in the Jiangzhe 江浙area during the Han to Six Dynasties period.

书籍目录

第一章 概况

第一节 地理环境

第二节 历史沿革

第三节 发现与发掘概况

第四节 资料整理和报告编写

第二章 单位墓葬详述

第一节 两汉墓葬

一 土坑墓

(一)一墩一穴土坑墓

1. 长方形土坑墓

(1)长方形窄坑

M30

M38

M18

M2

M39

(2)长方形宽坑

M33

M3

M10

M42

M59

M17

M19

2. 刀把形土坑墓

M29

M50

(二)一墩二穴土坑墓

1. M35和M36

刀把形宽坑M35

长方形窄坑M36

2. M46和M47

长方形窄坑M46

长方形宽坑M47

3. M57和M58

长方形宽坑M57

刀把形窄坑M58

(三)一墩三穴土坑墓

长方形宽坑M56A

长方形窄坑M56B

刀把形窄坑M56C

(四)其他

M28

M37

M60

<<余杭义桥汉六朝墓>>

二 砖室墓

(一)长方形砖室墓

1. 前后室结构墓

M13

2. 单室结构墓

M6

M8

M31

M43

M45

M48

M51

M52

M53

M54

M62

(二)凸字形砖室墓

1. 前后室结构墓

M207

2. 单室结构墓

M1

M34

M44

(三)T字形砖室墓

M14

(四)其他

M9

M12

M15

M32

三 采集遗物

第二节 六朝墓葬

一 长方形砖室墓

M41

M16

二 凸字形砖室墓

(一)前后室结构

M7

M22

M40

M4

(二)单室结构

M21

M23

M24

M25

三 刀把形砖室墓

<<余杭义桥汉六朝墓>>

M20

M55

四 T字形砖室墓

M11

第三章 墓葬形制与出土遗物类型

第一节 墓葬形制

一 土坑墓

二 砖室墓

第二节 出土遗物类型

一 陶器

(一)质地

(二)制法

(三)釉

(四)纹饰

(五)器形

1. 仿铜陶礼器

2. 生活用器

3. 模型明器

二 瓷器

(一)青瓷

(二)黑(酱)釉瓷

三 铜器

四 铁器

五 其他

(一)银器

(二)琉璃器

(三)石器

第四章 分期与年代

第一节 墓葬分组

第二节 分期与年代

第三节 各期墓葬形制的发展和随葬品组合的演变

一 墓葬形制的发展

二 随葬品组合的演变

第五章 结语

第一节 墓地选择与墓葬分布

第二节 葬俗

第三节 墓地性质

第四节 汉墓文化因素分析

第五节 汉墓中的合葬习俗

第六节 墓地特点

附表一 土坑墓登记表

附表二 砖室墓登记表

附表三 出土铜镜统计表

附录一 战国墓葬

附录二 宋代墓葬

附录三 明清墓葬

后记
