

<<中国含油气盆地构造类型>>

图书基本信息

书名：<<中国含油气盆地构造类型>>

13位ISBN编号：9787502143589

10位ISBN编号：7502143580

出版时间：2003-8

出版单位：石油工业出版社

作者：李德生，李大伟 著

页数：188

字数：442000

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<中国含油气盆地构造类型>>

内容概要

Some geologists contribute more than others to the world's energy supply and Prof. Li Desheng is one of them. Petroleum geology is one of the highest impact careers of the 20th century and will continue to be such well into the 21st century. The geologist's role in keeping up the demand for energy is essential and basic for the improving standard of living worldwide and improving technology worldwide. Geologists are the key to finding the place to explore, to do seismic, and to drill. They must find oil and gas where it has never been found before, where worn-out dogmas have prevented further exploration and denied discovery. Geologists must have new ideas, must have the courage to transplant models into new horizons, new basins. It takes more than good science to do this. A geologist must have the enormous courage for their convictions. They must sometimes face ridicule, skepticism, and bureaucracy. They must learn to communicate, to convince, to lead, in order to make their discoveries and deal with their failures. Geology alone is rarely enough. Prof. Li Desheng is the type section of the best kind of geologist. He has discovered and/or developed vast petroleum reserves for the benefit of his country, and mankind. He had the courage to challenge the geologic "dogmas" of the day. He has had the leadership to deliver teams of discoverers to the world for resource development. Prof. Li's career will be the envy of many geologists who follow him. As students, we all dream of the field adventures we might one day have. We dream of someday finding one significant oil and gas field. It is the rare geologist who can claim the great number of field experiences and discoveries that Prof. Li has to his credit.
