## <<综合生态系统管理理论与实践>>

### 内容概要

Land is the most essential environmental element in the earth ecosystem and the fundamental human beings are dependent on. Land is called "the Mother gestating human beings". Global land degradation has been worsening due to excessive development and unsustainable management of land resource. Land degradation has caused vulnerability of some land ecosystems, dramatic reduction in agricultural and animal husbandry productivity and has directly threatened food security and ecosystem health of the world. As a major environmental issue threatening human beings' livelihood and development, land degradation has increasingly received great attention from the international community.
