

<<力学中的偏微分方程（第2卷）>>

图书基本信息

书名：<<力学中的偏微分方程（第2卷）>>

13位ISBN编号：9787506266086

10位ISBN编号：7506266083

出版时间：2004-4

出版单位：世界图书出版公司

作者：A.P.S.Selvdurai

页数：698

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<力学中的偏微分方程（第2卷）>>

内容概要

The material presented in these monographs is the outcome of the author's long-standing interest in the analytical modelling of problems in mechanics by appeal to the theory of partial differential equations. The impetus for writing these volumes was the opportunity to teach the subject matter to both undergraduate and graduate students in engineering at several universities. The approach is distinctly different to that which would adopted should such a course be given to students in pure mathematics; in this sense, the teaching of partial differential equations within an engineering curriculum should be viewed in the broader perspective of "The Modelling of Problems in Engineering". An engineering student should be given the opportunity to appreciate how the various combination of balance laws, conservation equations, kinematic constraints, constitutive responses, thermodynamic restrictions, etc.

书籍目录

8. The biharmonic equation 8.1 The concept of a continuum 8.2 Displacements and strains in continua 8.2.1 Physical interpretations of the strain matrix 8.2.2 Physical interpretation of the rotation matrix 8.2.3 Indicial notation representations of strain and rotation 8.2.4 Transformation of the strain matrix 8.2.5 Principal strains and strain invariants 8.2.6 Compatibility of strains 8.3 Stresses in a continuum 8.3.1 The stress dyadic and the stress matrix 8.3.2 Traction on an arbitrary plane 8.3.3 Equations of equilibrium 8.3.4 Symmetry of the stress matrix 8.3.5 Sign convention for stresses 8.3.6 Transformation of the stress matrix 8.3.7 Principal stresses and stress invariants 8.4 Constitutive equations for linear elastic solids 8.4.1 Generalized Hooke's Law 8.4.2 The strain energy density 8.4.3 Symmetry of the elasticity matrix 8.4.4 Isotropic elastic material 8.4.5 Thermodynamic constraints on the elastic constants 8.4.6 Boundary conditions 8.4.7 Time derivatives 8.5 Uniqueness theorem in the classical theory of elasticity 8.6 Plane problems in classical elasticity 8.7 The Airy Stress function 8.8 Methods of solution of the biharmonic equation9. Poisson's equation Bibliography Index
