## ＜＜纽结和物理学＞＞

图书基本信息
书名：＜＜纽结和物理学＞＞
13位ISBN编号：9787506266239
10位ISBN编号：7506266237
出版时间：20044
出版时间：北京世图
作者：LouisH ．Kauffman
版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## 内容概要

Thisbook hasitsoriginsin two short coursesgiven by the author in Bologna and Torino，Italy during the Fall of 1985．At that time，connectionsbetween statistical physicsand the Jones polynomial were just beginning to appear， and it semed to beagood ideato write abook of lecturenotesentitled Knotsand Physics．The subject of knot polynomialswasopening up，with the Jonespolynomial asthefirst link polynomial able to distinguish knotsfrom their mirror images．We were looking at the tip of an iceberg，t T he field hasgrown by leapsand boundswith remarkablecontributionsfrom mathematiciansand physicists－awonderful interdisciplinary interplay．In writing thisbook I wanted to preserve the flavor of those old Bologna／T orino notes，and I wanted to provide apathway into the more recent events．After agood deal of exploration，I decided，in 1989，to design abook divided into two parts．The first part would be combinatorial，elementary，devoted to thebracket polyno－mial asstate model， partition function，vacuum－vacuum amplitude，Yang－Baxter model．Thebracket also providesan entry point into the subject of quantum groups，and it isthe beginning of a significant generalization of the Penrose spin－networks （see Part II，section 13．）Part II isan exposition of a set of related topics，and providesroom for recent developments．In itsfirst incarnation，Part II held material on thePottsmodel and on spin－networks．
