<<Microsoft windows管理员>>

内容概要

When writing my first scripting book, *Managing Windows with VBScript and WMI* (Addison Wesley, 2004), I set out to create what was at the time an industry first: a book designed not for developers but specifically for Microsoft Windows administrators with very little VBScript experience who wanted to learn just enough VBScript to be effective. Since that book was published, Windows administrators have become more and more skilled with Windows Script Host, VBScript, Windows Management Instrumentation, and other related technologies. Because administrators attending conferences and viewing my Web site (<http://www.ScriptingAnswers.com>) are beginning to ask questions about more complex technologies and techniques, the time has come for a book that covers advanced topics. In this book, my :ble co-author, Jeffery Hicks, and I try to cover some of the more advanced scripting techniques that we use every day. We certainly aren't pretending that we touch on every topic that might be considered "advanced"; after all, scripting is as varied and complex as Microsoft Windows itself. Instead, we try to cover the most useful advanced echnologies, recognizing that our fellow administrators are typically as practical and pragmatic as we are. We also try to cover these technologies in much the same way that we learned about them, by presenting complete solutions and line-by-line walkthroughs, so that you can see the final product as well as a detailed description of how and why it works.

书籍目录

AcknowledgementsIntroductionPart The Basics of Advanced Windows Scripting 1 Getting Started
Prerequisite Knowledge Understanding Windows Script Host Basics Using the FileSystemObject
Library Understanding Arrays Understanding Active Directory Services Interface Fundamentals
Understanding Windows Management Instrumentation Fundamentals. Advanced Scripting Goals Securing
Your Scripts Creating Your Own Script Components and Libraries Running Scripts Remotely
Retrieving Information from Active Directory Manipulating Information Stored in a Database Managing
Your Windows Environment with WMI Events Using New WMI Classes with Windows XP and Windows
Server 2003 Managing Group Policy Objects with Scripting Managing Your Exchange 2003 Environment
Incorporating Your Scripts into Microsoft Operations Manager Creating a Visual Interface for Your
Script with Internet Explorer and HTML Applications (HTAs) What We Won't Cover Finding
Information about JScript, Perl, Python, and KiXtart The Right Tool for the Job Scripting Techniques
Summary 2 Script Security Script Encoding and Decoding Script Signing and the Windows Script Host
TrustPolicy Understanding Digital Certificates and Script Signing .. Understanding WSH TrustPolicy
Configuring WSH TrustPolicy in Your Environment Signing Scripts by Using a Digital Certificate
Using Software Restriction Policies Alternate Credentials Using the RunAs Command Using Scheduled
Tasks Credentials Using ADSI Alternate Credentials Using WMI Alternate Credentials SummaryPart
Packaging Your Scripts 3 Windows Script Files Defining Windows Script Files Understanding XML The
package Tag The comment Tag The job Tag The runtime Tag The description Tag The
example Tag The named Tag The object Tag The script Tag Creating Script Jobs Including
Other Scripts Adding Resources Creating Examples and Help Text Using Named Parameters The
name Property The helpstring Property The type Property The required Property Viewing a
Windows Script File in Action.....Part The Basics of Advanced Windows ScriptingPart Scripting for the
EnterprisePart Appendix
