

<<非线性纤维光学>>

图书基本信息

书名：<<非线性纤维光学>>

13位ISBN编号：9787506292573

10位ISBN编号：7506292572

出版时间：2009-1

出版时间：世界图书出版公司

作者：阿瓜瓦尔

页数：529

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## 前言

Since the publication of the first edition of this book in 1989 , the field of nonlinear fiber optics has remained an active area of research and has thus continued to grow at a rapid pace. During the 1990s , a major factor behind such a sustained growth was the advent of fiber amplifiers and lasers , made by doping silica fibers with rare-earth materials such as erbium and ytterbium. Erbium-doped fiber amplifiers revolutionized the design of fiber-optic communication systems , including those making use of optical solitons , whose very existence stems from the presence of nonlinear effects in optical fibers. Optical amplifiers permit propagation of lightwave signals over thousands of kilometers as they can compensate for all losses encountered by the signal in the optical domain. At the same time , fiber amplifiers enable the use of massive wavelength-division multiplexing , a technique that led by 1999 to the development of lightwave systems with capacities exceeding 1 Tb/s. Nonlinear fiber optics plays an important role in the design of such high-capacity lightwave systems. In fact , an understanding of various nonlinear effects occurring inside optical fibers is almost a prerequisite for a lightwave-system designer. Starting around 2000 , a new development occurred in the field of nonlinear fiber optics that changed the focus of research and has led to a number of advances and novel applications in recent years. Several kinds of new fibers , classified as highly nonlinear fibers , have been developed. They are referred to with names such as microstructured fibers , holey fibers , or photonic crystal fibers , and share the common property that a relatively narrow core is surrounded by a cladding containing a large number of air holes. The nonlinear effects are enhanced dramatically in such fibers to the extent that they can be observed even when the fiber is only a few centimeters long. Their dispersive properties are also quite different compared with those of conventional fibers developed for telecommunication applications. Because of these changes , microstructured fibers exhibit a variety of novel nonlinear effects that are finding applications in fields as diverse as optical coherence tomography and high-precision frequency metrology.

## <<非线性纤维光学>>

### 内容概要

这是一本内容非常新颖的非线性纤维光学的研究生教材。

自1989年初版以来,随着非线性纤维光学的迅速发展,作者对其内容不断地更新和扩充。

这最新版虽保留了第1版的大部分内容,但更重要的是它全面介绍了非线性纤维光学领域的最新研究成果,这一特点使得该书不仅是一本优秀的教材,也是相关领域的科学家和工程师的一本重要的参考书。

书籍目录

Preface 1 Introduction 1.1 Historical Perspective 1.2 Fiber Characteristics 1.2.1 Material and Fabrication  
 1.2.2 Fiber Losses 1.2.3 Chromatic Dispersion 1.2.4 Polarization-Mode Dispersion 1.3  
 Fiber Nonlinearities 1.3.1 Nonlinear Refraction 1.3.2 Stimulated Inelastic Scattering 1.3.3 Importance of  
 Nonlinear Effects 1.4 Overview Problems References 2 nsdc Propagation in Fibers 2.1 Maxwell ' S  
 Equations 2.2 Fiber Modes 2.2.1 Eigenvalue Equation 2.2.2 Single-Mode Condition 2.2.3 Characteristics of  
 the Fundamental Mode 2.3 Pulse-Propagation Equation 2.3.1 Nonlinear Pulse Propagation 2.3.2  
 Higher-Order Nonlinear Effects 2.4 Numerical Methods 2.4.1 Split-Step Fourier Method 2.4.2  
 Runge-Kutta Methods Problems References Group-Velocity Dispersion 3.1 Different Propagation  
 Regimes 3.2 Dispersion-Induced Pulse Broadening 3.2.1 Gaussian Pulses 3.2.2 Chirped Gaussian Pulses  
 3.2.3 Hyperbolic Secant Pulses 3.2.4 Super-Gaussian Pulses 3.2.5 Experimental Results 3.3 Third-Order  
 Dispersion 3.3.1 Evolution of Chirped Gaussian Pulses 3.3.2 Broadening Factor 3.3.3 Arbitrary-Shape  
 Pulses 3.3.4 Ultrashort-Pulse Measurements 3.4 Dispersion Management 3.4.1 GVD-Induced Limitations  
 3.4.2 Dispersion Compensation 3.4.3 Compensation of Third-Order Dispersion. Problems References 4  
 Self-Phase Modulation 4.1 SPM-Induced Spectral Changes 4.1.1 Nonlinear Phase Shift 4.1.2  
 Changes in Pulse Spectra 4.1.3 Effect of Pulse Shape and Initial Chirp 4.1.4 Effect of Partial Coherence 4.2  
 Effect of Group-Velocity Dispersion 4.2.1 Pulse Evolution 4.2.2 Broadening Factor 4.2.3 Optical-Wave Breaking 4.2.4 Experimental Results 4.2.5 Effect of Third-Order  
 Dispersion 4.2.6 SPM Effects in Fiber Amplifiers 4.3 Semianalytic Techniques 4.3.1 Moment Method 4.3.2  
 Variational Method 4.3.3 Specific Analytic Solutions 4.4 Higher-Order Nonlinear Effects 4.4.1  
 Self-Steeptening 4.4.2 Effect of GVD on Optical Shocks 4.4.3 Intrapulse Raman Scattering Problems  
 References 5 Optical Solitons 6 Polarization Effects 7 Cross-Phase Modulation 8 Stimulated Raman  
 Scattering 9 Stimulated Brillouin Scattering 10 Four-Wave Mixing 11 Highly Nonlinear Fibers 12 Novel  
 Nonlinear Phenomena A System of Units B Numerical Code for the NLS Equation C List of Acronyms Index
