

<<有机合成现代方法>>

图书基本信息

书名：<<有机合成现代方法>>

13位ISBN编号：9787506292702

10位ISBN编号：750629270X

出版时间：2008-10

出版公司：世界图书出版公司

作者：卡如萨

页数：493

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<有机合成现代方法>>

前言

This book is addressed principally to advanced undergraduates and to graduates at the beginning of their research careers, and aims to bring to their notice some of the reactions used in modern organic syntheses. Clearly, the whole field of synthesis could not be covered in a book of this size, even in a cursory manner, and a selection has had to be made. This has been governed largely by consideration of the usefulness of the reactions, their versatility and, in some cases, their selectivity.

## <<有机合成现代方法>>

### 内容概要

The fourth edition of this well-known textbook discusses the key methods used in organic synthesis, showing the value and scope of these methods and how they are used in the synthesis of complex molecules. All the text from the third edition has been revised, to produce a modern account of traditional methods and an up-to-date description of recent advancements in synthetic chemistry. The textbook maintains a traditional and logical approach in detailing carbon-carbon bond formations, followed by a new chapter on the functionalization of alkenes and concluding with oxidation and reduction reactions. Reference style has been improved to include footnotes, allowing easy and rapid access to the primary literature. In addition, a selection of problems has been added at the end of each chapter, with answers at the end of the book. The book will be of significant interest to chemistry and biochemistry students at advanced undergraduate and graduate level, as well as to researchers in academia and industry who wish to familiarize themselves with modern synthetic methods.

## 书籍目录

Preface to the first edition Preface to the fourth edition  
 1 Formation of carbon-carbon single bonds  
 1.1 Main-group chemistry  
 1.1.1 Alkylation of enolates and enamines  
 1.1.2 Conjugate addition reactions of enolates and enamines  
 1.1.3 The aldol reaction  
 1.1.4 Asymmetric methodology with enolates and enamines  
 1.1.5 Organolithium reagents  
 1.1.6 Organomagnesium reagents  
 1.1.7 Organozinc reagents  
 1.1.8 Allylic organometallics of boron, silicon and tin  
 1.2 Transition-metal chemistry  
 Problems  
 1.2.1 Organocopper reagents  
 1.2.2 Organochromium chemistry  
 1.2.3 Organocobalt chemistry  
 1.2.4 Organopalladium chemistry  
 2 Formation of carbon-carbon double bonds  
 2.1 B-Elimination reactions  
 2.2 Pyrolytic syn eliminations  
 2.3 Fragmentation reactions  
 2.4 Alkenes from hydrazones  
 2.5 Alkenes from 1,2-diols  
 2.6 Alkenes from alkynes  
 2.7 The Wittig and related reactions  
 2.8 Alkenes from sulfones  
 2.9 Alkenes using titanium or chromium reagents  
 2.10 Alkene metathesis reactions  
 Problems  
 3 Pericyclic reactions  
 3.1 The Diels-Alder cycloaddition reaction  
 3.1.1 The dienophile  
 3.1.2 The diene  
 3.1.3 Regiochemistry of the Diels-Alder reaction  
 3.1.4 Stereochemistry of the Diels-Alder reaction  
 3.1.5 Intramolecular Diels-Alder reactions  
 3.1.6 The retro Diels-Alder reaction  
 3.1.7 Asymmetric Diels-Alder reactions  
 3.2 [2+2] Cycloaddition reactions  
 3.3 Cycloaddition reactions with allyl cations and allyl anions  
 3.4 1,3-Dipolar cycloaddition reactions  
 3.5 The ene reaction  
 3.6 [3,3]-Sigmatropic rearrangements  
 3.6.1 The Cope rearrangement  
 3.6.2 The Claisen rearrangement  
 3.7 [2,3]-Sigmatropic rearrangements  
 3.8 Electrocyclic reactions  
 Problems  
 4 Radical and carbene chemistry  
 4.1 Radicals  
 4.1.1 Radical abstraction reactions  
 4.1.2 Radical addition reactions  
 4.2 Carbenes  
 Problems  
 5 Functionalization of alkenes  
 5.1 Hydroboration  
 5.1.1 Reactions of organoboranes  
 5.2 Epoxidation and aziridination  
 5.2.1 Epoxidation  
 5.2.2 Asymmetric epoxidation  
 5.2.3 Aziridination  
 .....  
 6 Oxidation  
 7 Reduction  
 Answers to problems  
 Index
