<<代数拓扑讲义>>

前言

This is essentially a book on singular homology and cohomology with special emphasis on products and manifolds. It does not treat homotopy theory except for some basic notions, some examples, and some applications of homology to homotopy. Nor does it deal with general (co-)homology, but many formulations and arguments on singular homology are so chosen that they also apply to general homology. Because of these absences I have also omitted spectral sequences, their main applications in topology being to homotopy and general homology theory. Each-cohomology is treated in a simple ad hoc fashion for locally compact subsets of manifolds; a short systematic treatment for arbitrary spaces, emphasizing the universal property of the Čech-procedure, is contained in an appendix. The book grew out of a one-year's course on algebraic topology, and it can serve as a text for such a course. For a shorter basic course, say of half a year, one might use chapters II, III, IV (§ 1-4), V (§ 1-5, 7, 8), VI (§ 3, 7, 9, 11, 12). As prerequisites the student should know the elementary parts of general topology, abelian group theory, and the language of categories—although our chapter I provides a little help with the latter two. For pedagogical reasons, I have treated integral homology only up to chapter VI; if a reader or teacher prefers to have general coefficients from the beginning he needs to make only minor adaptations. As to the outlay of the book, there are eight chapters, I–VIII, and an appendix, A each of these is subdivided into several sections, 1, 2, Definitions, propositions, remarks, formulas etc. are consecutively numbered in each, each number preceded by the number. A reference like III, 7.6 points to chap. III, 7, no. 6 (written 7.6) which may be a definition, a proposition, a formula, or something else. If the chapter number is omitted the reference is to the chapter at hand. References to the bibliography are given by the author's name, e.g. Seifert-Threlfall; or Steenrod 1951, if the bibliography lists more than one publication by the same author.

书籍目录

Chapter I Preliminaries on Categories, Abelian Groups, and Homotopy	§ 1 Categories and Functors	§ 2
Abelian Groups (Exactness, Direct Sums, Free Abelian Groups)	§ 3 Homotopy	Chapter II Homology of
Complexes	§ 1 Complexes	§ 2 Connecting Homomorphism, Exact Homology Sequence
§ 3 Chain-Homotopy	§ 4 Free Complexes	Chapter III Singular Homology
§ 1 Standard Simplices and Their	Linear Maps	§ 2 The Singular Complex
§ 3 Singular Homology	§ 4 Special Cases	§ 5 Invariance under
Homotopy	§ 6 Barycentric Subdivision	§ 7 Small Simplices. Excision
§ 8 Mayer-Vietoris	Sequences	Chapter IV Applications to Euclidean Space
§ 1 Standard Maps between Cells and Spheres	§ 2	Homology of Cells and Spheres
§ 3 Local Homology	§ 4 The Degree of a Map	§ 5 Local Degrees
§ 6 Homology Properties of Neighborhood Retracts in $\mathbb{R}^n$	§ 7 Jordan Theorem, Invariance of Domain	§ 8
Euclidean Neighborhood Retracts (ENRs)	Chapter V Cellular Decomposition and Cellular Homology	§ 1
Cellular Spaces	§ 2 CW-Spaces	§ 3 Examples
§ 4 Homology Properties of CW-Spaces	§ 5 The	Euler-Poincaré Characteristic
§ 6 Description of Cellular Chain Maps and of the Cellular Boundary	Homomorphism	§ 7 Simplicial Spaces
§ 8 Simplicial Homology	Chapter VI Functors of Complexes	§ 1
Modules	§ 2 Additive Functors	§ 3 Derived Functors
§ 4 Universal Coefficient Formula	§ 5 Tensor and	Torsion Products
§ 6 Hom and Ext	§ 7 Singular Homology and Cohomology with General Coefficient	Groups
§ 8 Tensorproduct and Bilinearity	§ 9 Tensorproduct of Complexes	Kunneth Formula
§ 10 Horn	of Complexes. Homotopy Classification of Chain Maps	§ 11 Acyclic Models
§ 12 The Eilenberg-Zilber	Theorem. Kunneth Formulas for Spaces	Chapter VII Products
§ 1 The Scalar Product	§ 2 The Exterior	Homology Product
§ 3 The Interior Homology Product (Pontrjagin Product)	§ 4 Intersection Numbers in	$\mathbb{R}^n$
§ 5 The Fixed Point Index	§ 6 The Lefschetz-Hopf Fixed Point Theorem	§ 7 The Exterior
Cohomology Product		Chapter VIII Manifolds
Appendix	Bibliography	Subject Index
