

<<ISS2005国际土木工程会议>>

图书基本信息

书名：<<ISS2005国际土木工程会议论文集（全3册）>>

13位ISBN编号：9787564101886

10位ISBN编号：7564101881

出版时间：2005-1

出版时间：Zhitao Lu、Zhishen Wu、Aiqun Li、Shaoping Meng 东南大学出版社（2005-01出版）

<<ISISS2005国际土木工程会议>>

内容概要

Description

This set includes 3 books about papers presented at the International Symposium on Innovation & Sustainability of Structures in Civil Engineering (ISISS'2005) in Nanjing, China. These papers are in English.

章节摘录

Preface
Preface
The International Symposium on Innovation & Sustainability of Structure in Civil Engineering (ISS'2005) is held in Nanjing, China, November 20-22, 2005. It is organized by Southeast University and operated by the key laboratory of RC & PC Structure, Ministry of Education, China and sponsored by many related international and national organizations. The Proceedings contain 10 keynote papers, 14 invited papers and 220 contributed papers presented at the symposium. These papers cover a wide spectrum of topics and originated from 26 countries and regions around the world where the R&D on the symposium topics are considered to be put forward actively. They report the current state-of-the-art and point to future directions of research in this thematic field. The number of deteriorating structures is increasing dramatically worldwide. Cost for maintenance, repair, rehabilitation and regeneration of these structures far exceed available budgets. Meanwhile, the importance of minimum life-cycle cost and environmentally conscious design strategies for next generation structures is now accepted not only by the infrastructure engineering fraternity but also by the general public. Moreover, the constructions of inexperienced large-scale and complex structures are still continuously required to meet the requirements for the social development. Due to these backgrounds, innovation & sustainability of structure have become an increasingly important theme in civil, mechanical and aeronautical engineering etc.....
