

<<环境科学专业英语>>

图书基本信息

书名：<<环境科学专业英语>>

13位ISBN编号：9787801638335

10位ISBN编号：7801638336

出版时间：2004-4

出版时间：中国环境科学出版社

作者：王素凤 编

页数：259

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

## <<环境科学专业英语>>

### 前言

当前,环境问题日益严重,环境科学专业已经成为大中专院校的热门学科之一。为了使环境专业的学生掌握专业英语词汇,熟悉科技交流的英语表达方式,以便能顺利阅读英文版环境科技读物,更大程序地丰富专业知识,多层次多角度了解全球科学信息,把握国内外科技进展,我们编写了这本书,力求给读者专业、环境管理专业、环境监理专业、环境法学专业、食品安全专业以及环境工程专业的学生使用。

全书共分4部分。

第一部分介绍生态环境的基本内容,第二部分介绍了全球的环境问题。

第三部分着重介绍了环境问题给人类带来的影响,第四部分介绍了政府针对环境问题实施的政策、措施、法律、经济等管理手段,以及环境污染的控制技术。

### 内容概要

当前,环境问题日益严重,环境科学专业已经成为大中专院校的热门学科之一。为了使环境专业的学生掌握专业英语词汇,熟悉科技交流的英语表达方式,以便能顺利阅读英文版环境科技读物,更大程序地丰富专业知识,多层次多角度了解全球科学信息,把握国内外科技进展,我们编写了这《大专院校专业英语读物:环境科学专业英语》,力求给读者专业、环境管理专业、环境监理专业、环境法学专业、食品安全专业以及环境工程专业的学生使用。

全书共分4部分。

第一部分介绍生态环境的基本内容,第二部分介绍了全球的环境问题。

第三部分着重介绍了环境问题给人类带来的影响,第四部分介绍了政府针对环境问题实施的政策、措施、法律、经济等管理手段,以及环境污染的控制技术。

《大专院校专业英语读物:环境科学专业英语》的编写宗旨是力求让读者学到纯正的专业英语,所有的文章的编写均参考原牌外文书刊及国外英文网站,并在每章后对文章的参考网站及文献已作了注释。

## 书籍目录

Unit 1 Ecological Environment Part 1 Ecosystem Biomes Part 2 Ecosystem Pathways Part 3 Ecosystem Producers , Consumers , Decomposers Part 4 Ecosystem-Rock Cycles Part 5 Ecosystem Communication Part 6 Plants That Purify : Natures Way to Treat Sewage Unit 2 Environmental Disturbance and Problems. Part 1 Destructive Power of Nature 1. Avalanche 2. Tsunami 3. E1 Nifio 4. Earthquake 5. Flood 6. Lightning 7. Volcanoes 8. Desertification Part 2 Destructive Power of Mankind 1. Deforestation 2. Endangered Species Part 3 The Problems We Face 1. Population Growth 2. Air Pollution 3. Water Pollution Unit 3 The Effects of Pollution Part 1 The Effects of Air Pollution on Health Introduction to the Damage to Human Health of Air Pollution 1. Outdoor Air and Health 2. Indoor Air : Still a Major Threat 3. Six Air Pollutants Have the Greatest Impact on the Health of Children and Adults Reading Material : The Health Effects of Air Pollution 4. Effects of Air Pollution on Living Organisms and on Materials 5. The Effects of the Earth Warming Part 2 The Effects of Water Pollution 1. Infectious Diseases Associated with Poor Water Quality 2. Impact of Wastewater Irrigation on Health 3. The Effects of Water Pollution in the Great Lakes 4. Toxic Effects of Metals in Water Pollution Part 3 The Effects of Solid Wastes 1. Hazardous Solid Wastes 2. The Relationship Between Climate Change and Solid Waste Part 4 The Effects of Noise Pollution Noise pollution : A Health Problem. Introduction 1. Hearing Loss 2. Heart Disease 3. The Bodys Other Reactions 4. Noise and the Unborn 5. Special Effects on Children 6. Intrusion at Home and Work 7. Sleep Disruption 8. Mental and Social Well-Being 9. Danger to Life and Limb 10. A Final Word Unit 4 Pollution Control Introduction to Pollution Control Part 1 Environmental Management Systems 1. About ISO14000 2. About the Kyoto Protocol 3. Environment and Economy 4. Environmental Management in American 5. Information on Hong Kongs Environmental Laws 6. Something about Chinese Mainland 7. Environmental Related Treaties in WTO Part 2 Pollution Control Engineering 1. Methods of Wastewater Treatment Reading Material : Treatment of Slaughterhouse Wastewater in One-stage and in Two-stage UASB Reactors 2. Methods of Cleaning Air Reading Material : For Fabric Filters 3. Techniques for Removal Pollutants from Soil Reading Material : Cleaning of Mercury Contaminated Soil by Using a Combined Washing and Distillation Process Reading Material : How to Avoid The Harm of Pesticide in America

## 章节摘录

Among the more significant point sources are municipal landfills and industrial waste disposal sites. When either of these occur in or near sand and gravel aquifers, the potential for widespread contamination is the greatest. In Ville Mercier, Quebec, for example, the disposal of industrial wastes into lagoons in an old gravel pit over many years rendered the water supplies of thousands of residents in the region unusable. Water had to be pumped from a well 10 kilometers away to replace the area's supply. Other point sources are individually less significant, but they occur in large numbers all across the country. Some of these dangerous and widespread sources of contamination are septic tanks, leaks and spills of petroleum products and of dense industrial organic liquids. Septic systems are designed so that some of the sewage is degraded in the tank and some is degraded and absorbed by the surrounding sand and subsoil. Contaminants that may enter groundwater from septic systems include bacteria, viruses, detergents, and household cleaners. These can create serious contamination problems. Despite the fact that septic tanks and cesspools are known sources of contaminants, they are poorly monitored and very little studied. Contamination can render groundwater unsuitable for use. Although the overall extent of the problem across Canada is unknown, many individual cases of contamination have been investigated such as Ville Mercier in Quebec; the highway de-icing salt problem in Nova Scotia; industrial effluents in Elmira, Ontario; various pesticides in the Prairie provinces; industrial contamination in Vancouver, British Columbia; and so on. In many cases, contamination is recognized only after groundwater users have been exposed to potential health risks. The cost of cleaning up contaminated water supplies is usually extremely high.

Contamination problems are increasing in Canada primarily because of the large and growing number of toxic compounds used in industry and agriculture. In rural Canada, scientists suspect that many household wells are contaminated by substances from such common sources as septic systems, underground tanks, used motor oil, road salt, fertilizer, pesticides, and livestock wastes. Scientists also predict that in the next few decades more contaminated aquifers will be discovered, new contaminants will be identified, and more contaminated groundwater will be discharged into wetlands, streams and lakes.
