## <<全国职称英语等级考试押题试卷>>

### 内容概要

职称英语自从实行全国统一考试以来,以其独特的题型,较高的难度要求,使得许多考生不太适应。目前参加初级、中级和高级职称评定的同志由于种种原因,有的只是自学过一些英语,有的学的是俄语或日语,有的在实际工作中与英语接触甚少,这使得许多同志的英语基础较为薄弱。针对以上客观事实,我们组织工作在教学第一线的教师编写了这套《全国职称英语等级考试丛书》。本套丛书根据最新考试大纲编写,具体特点如下: 详尽列举了常考的词汇和语法考点; 剖析了各种题型的解题技巧; 荟萃了历史优秀真题; 列举了大量的专项练习题。

总之,这套丛书不仅是一套技巧讲解手册,更是一套词汇、语法等常考考点的记忆手册。

## 章节摘录

Volts from the Sky      1 Lightning has caused awe and wonder since old times . Although Benjamin Franklin demonstrated lightning as an enormous electrical discharge more than 200 years ago, many puzzles still surround this powerful phenomenon . 2 Lightning is generated when electrical charges separate in rain clouds , though processes are still not fully understood . Typically , positive charges build at the cloud top , while the bottom becomes negatively charged . In most instances of cloud-to-ground lightning , the negatively charged lower portion of the cloud repels negatively charged particles on the ground ' s surfaces , making it become positively charged . The positive charge on the ground gathers at elevated points . 3 A flow of electrons begins between the cloud and earth . When the voltage charge becomes large enough , it breaks through the insulating barrier of air , and electrons zigzag earthward . We see the discharge as lightning . 4 Lightning can occur within a cloud , between clouds , or between clouds and the ground . The first variety , intracloud lightning , is the most frequent but is often hidden from our view . Cloud-to-ground lightning , making up about 20 percent of lightning discharges , is what we usually see lightning comes in several forms , including sheet , ribbon , and ball , Intra-cloud lightning can illuminate a cloud so it looks like a white sheet , hence its name . When cloud-to-ground lightning occurs during strong winds , they can shift the lightning channel sideways , so it looks like a ribbon . The average lightning strike is more than 3 miles long and can travel at a tenth of the speed of light . Ball lightning , the rarest and most mysterious form , derives its name from the small luminous ball that appears near the impact point , moves horizontally , and lasts for several seconds.
