<<管理与成本会计>>

书籍目录

Contents

Preface

Part One: Introduction to Management and Cost Accounting

1 The scope of management accounting

The users of accounting information

The meaning of information

Measurement theory

The communication of information

The value of information

The decision-making process

The management process

The role of the management accountant in the management process

Behavioural and organizational aspects of management accounting

Cost accounting and management accounting

Summary of the contents of this book

Guidelines for using this book

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

2 Cost and revenue classification

Cost objectives

Classification of costs

Cost accounting: classification of costs for stock valuation and profit measurement

Classification for decision-making and planning

Classification for control

Self-assessment questions

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

Part Two: Cost Accumulation for Stock Valuation and Profit Measurement

3 Accounting for materials and labour

Materials control procedure

Pricing the issues of raw materials

Treatment of stores losses

Treatment of transportation costs

Treatment of materials handling costs

Just-in-time purchasing

Accounting for labour

Labour cost accounting

<<管理与成本会计>>

Payroll accounting
Incentive schemes
Accounting treatment of various labour cost items
Decision-making and cost control
Self-assessment questions
Summary
Key terms and concepts
Recommended reading
References and further reading
Appendix 3.1: Stores pricing methods
Key examination points
Questions
4 Accounting for overhead expenditure
An overview of the procedure for allocating overheads to products
Blanket overhead rates
Procedure for calculating cost centre overhead rates
An illustration of the overhead allocation procedure
Predetermined overhead rates
Under and over recovery of overheads
Measuring capacity
Significance of volume measures for control
Significance of volume measures for product pricing
Overhead absorption rates and new manufacturing technology
Non-manufacturing overheads
Overheads for decision-making
Overheads for control
Self-assessment questions
Summary
Key terms and concepts
Recommended reading
References and further reading
Appendix 4.1: Inter-service department transfers
Appendix 4.2: Overhead absorption rates
Key examination points
Questions
5 Accounting entries for a job costing system
Control accounts
Recording the purchase of raw materials
Recording the issue of materials
Accounting procedure for labour costs
Accounting procedure for manufacturing overheads
Non-manufacturing overheads
Accounting procedures for jobs completed and products sold
Costing profit and loss account
Interlocking accounting
Contract costing
Work in progress valuation and amounts recoverable on contracts

<<管理与成本会计>>

Self-assessment question

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

6 Process costing

Flow of costs in a process costing system

Normal and abnormal losses

Accounting for the sale of scrap

Abnormal gains

Opening and closing work in progress

Previous process cost

Opening work in progress

Weighted average method

First-in, first-out (FIFO) method

Equivalent production and normal losses

Equivalent production and abnormal losses

Process costing for decision-making and cost control

Batch costing

Self-assessment questions

Summary

Key terms and concepts

Recommended reading

References and further reading

Appendix 6.1: Treatment of normal and abnormal losses when they occur part way through the process

Key examination points

Questions

7 Joint product and by-product costing

Methods of apportioning joint costs to joint products

Limitations of joint cost allocations for decision-making

Accounting for by-products

By-products, scrap and waste

Defective units

Self-assessment question

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

8 Absorption costing and variable costing

Problem of terminology

External and internal reporting

Variable costing and absorption costing: a comparison of their impact

<<管理与成本会计>>

on profit

Some arguments in support of variable costing

Some arguments in support of absorption costing

The variable costing versus absorption costing debate

Relevant costing

Internal profit measurement

Current cost accounting

Self-assessment question

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

Part Three: Information for Decision-making

9 Cost-volume-profit analysis

The economist's model

The accountant's cost-volume-profit model

Changes in fixed costs and selling prices

A mathematical approach to cost-volume-profit analysis

Margin of safety

Constructing the break-even chart

Alternative presentation of cost-volume-profit analysis

Cost-volume-profit analysis assumptions

Cost-volume-profit analysis and computer applications

Application of cost-volume-profit analysis to non-manufacturing

decisions

Self-assessment questions

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

10 Special studies: measuring relevant costs for decision-making

Measuring relevant costs and benefits

Quantitative and qualitative factors

Deleting a segment

Special selling-price decisions

Decision-making and the influence of limiting factors

Make or buy decisions

Replacement of equipment

Conflict between decision-making and performance-evaluation models

Problems in determining the relevant costs of materials

Problems in determining the relevant cost of labour

A comprehensive example

Self-assessment questions

<<管理与成本会计>>

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

11 Activity-based costing

Factors leading to the emergence of activity-based costing

Limitations of traditional cost systems

Activity-based cost systems

An illustration of ABC and traditional product costing systems

Impact of volume diversity

Classification of activities

Activity-based profitability analysis

Problems arising with computing unit costs

Resource consumption models

A comparison of activity-based systems with decision-relevant costs

An evaluation of activity-based costing

Self-assessment question

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

12 Accounting information for pricing decisions

The economist's pricing model

Calculating optimum selling prices using differential calculus

Oligopoly and perfect competition

Problems with the economists' model

Cost-based pricing formulae

Limitations of cost-plus pricing

Reasons for using cost-based pricing formulae

Decision-relevant costs for pricing decisions

Target costing

Specific products made to order

Pricing reviews

Choosing a pricing policy

The impact of new manufacturing technology

Self-assessment question

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

13 Decision-making under conditions of risk and uncertainty

<<管理与成本会计>>

A decision-making model
Risk and uncertainty
Probabilities
Probability distributions and expected value
Measuring the amount of uncertainty
Attitudes to risk by individuals
Decision-tree analysis
Use of cost information for pricing decisions under conditions of uncertainty
Problems with using probability theory in decision-making
Cost-volume-profit analysis under conditions of uncertainty
Buying perfect and imperfect information
Maximin, maximax and regret criteria
Portfolio analysis
Self-assessment question
Summary
Key terms and concepts
Recommended reading
References and further reading
Appendix 13.1: Cost-volume-profit analysis under conditions of uncertainty
Key examination points
Questions
14 Capital investment decisions: I
Objectives of capital budgeting
A decision-making model for capital investment decisions
The theory of capital budgeting
The opportunity cost of an investment
Compounding and discounting
The concept of net present value
Calculating net present values
Constant annual cash flows
The internal rate of return
Relevant cash flows
Timing of cash flows
Comparison of net present value and internal rate of return
Modified internal rate of return
Profitability index
Techniques that ignore the time value of money
Payback method
Accounting rate of return
Surveys of practice
The effect of performance measurement on capital investment decisions
Qualitative factors
Evaluating investments in advanced manufacturing technologies
Self-assessment question

<<管理与成本会计>>

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

15 Capital investment decisions: 2

A comparison of mutually exclusive investments with unequal lives

Capital rationing

Taxation and investment decisions

The effect of inflation on capital investment appraisal

Calculating risk-adjusted discount rates

Calculating a project's cost of capital

Weighted average cost of capital

Traditional methods of measuring risk

A summary of risk measurement techniques

Evaluating the lease versus borrowing decision

Authorization of capital investment proposals

Review of capital investment decisions

Self-assessment questions

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

Part Four Information for Planning and Control

16 The budgeting process

Stages in the planning process

Why do we produce budgets?

Conflicting roles of budgets

The budget period

Administration of the annual budget

Stages in the budgeting process

A detailed illustration

Sales budget

Production budget and budgeted stock levels

Direct materials usage budget

Direct materials purchase budget

Direct labour budget

Factory overhead budget

Selling and administration budget

Departmental budgets

Master budget

Cash budgets

Final review

Computerized budgeting

<<管理与成本会计>>

The budgeting process in non-profit-making organizations

Incremental and zero-base budgeting

Self-assessment question

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

17 Operational control and performance measurement

Control systems

Feedback and feed-forward systems

CResponsibility accounting and cost control

Flexible budgeting

Non-financial performance measures

Operational control and performance measurement systems: a summary

Activity-based cost management

The impact of new technology

Control of non-manufacturing costs

Control in non-profit organizations

Management audits

Management by objectives

Operational control and performance measurement in service organizations

Self-assessment questions

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

18 Standard costing and variance analyses: I

Operation of a standard costing system

Establishing cost standards

Types of cost standards

Purposes of standard costing

Variance analysis

Material variances

Material price variances

Material usage variance

Joint price usage variance

Total material variance

Labour variances

Wage rate variance

Labour efficiency variance

Total labour variance

Variable overhead variances

<<管理与成本会计>>

Variable overhead expenditure variance
Variable overhead efficiency variance
Similarities between materials, labour and overhead variances
Fixed overhead expenditure or spending variance
Sales variances
Total sales margin variance
Sales margin price variance
Sales margin volume variance
Difficulties in interpreting sales margin variances
Reconciling budgeted profit and actual profit
Standard absorption costing
Volume variance
Volume efficiency variance
Volume capacity variance
Summary of fixed overhead variances
Reconciliation of budgeted and actual profit for a standard absorption costing system
Performance reports
Self-assessment questions
Summary
Key terms and concepts
Recommended reading
References and further reading
Key examination points
Questions
19 Standard costing: 2. Further aspects
Direct materials mix and yield variances
Sales mix and sales quantity variances
Recording standard costs in the accounts
Accounting disposition of variances
Criticisms of standard costing variance analysis
Variance analysis and the opportunity cost of scarce resources
The investigation of variances
Types of variances
Simple rule of thumb cost investigation models
Statistical models not incorporating costs and benefits of investigation
Decision models with costs and benefits of investigation
Empirical evidence
Quantity variances
Self-assessment questions
Summary
Key terms and concepts
Recommended reading
References and further reading
Key examination points
Questions
20 Behavioural aspects of accounting control systems

<<管理与成本会计>>

The use of budgets as targets

The use of accounting control techniques for performance evaluation

Participation in the budgeting and standard setting process

Bias in the budget process

Management use of budgets

Conclusion

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

Part Five: Manufacturing Systems, Strategies and Technologies

21 Manufacturing systems, strategies and technologies: implications for the design of management accounting systems

Alternative production systems

Advanced manufacturing technologies

Production management strategies

Material requirements and manufacturing resources planning systems

The just-in-time approach

Optimized production technology

Factors influencing alternative production strategies

The influence of manufacturing systems and production strategies on the design of product cost accounting systems

Product costs for decision-making

Operational control and performance measurement

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

Part Six: The Application of Quantitative Methods to Management Accounting

22 Mathematical approaches to cost estimation

Non-mathematical techniques

Mathematical techniques

Tests of reliability

Multiple regression analysis

Requirements for using mathematical techniques

Problems that may arise when using mathematical cost equations

A summary of the steps involved in estimating cost functions

Cost estimation when the learning effect is present

Estimating incremental hours and incremental cost

Learning-curve applications

Cost estimation techniques used in practice

Self-assessment questions

Summary

<<管理与成本会计>>

Key terms and concepts

Recommended reading

References and further reading

Appendix 22.1: Partial table of t-values

Key examination points

Questions

23 Quantitative models for the planning and control of stocks

Why do firms hold stocks?

Relevant costs for quantitative models under conditions of certainty

Determining the economic order quantity

Assumptions of the EOQ formula

Application of the EOQ model in determining the length of a production run

Quantity discounts

Determining when to place the order

Uncertainty and safety stocks

The use of probability theory for determining safety stocks

Control of stocks through classification

Other considerations

Materials requirements planning

Just-in-time purchasing and manufacturing

Self-assessment questions

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

Questions

24 The application of Linear programming to management accounting

Single-resource constraints

Two-resource constraints

Linear programming

Graphical method

Simplex method

Interpreting the final matrix

Opportunity cost

Substitution process when additional resources are obtained

Use of linear programming

The use of linear programming in capital budgeting

Practical problems in applying linear programming

Application to other business problems

Self-assessment questions

Summary

Key terms and concepts

Recommended reading

References and further reading

Key examination points

<<管理与成本会计>>

Questions

Part Seven: Divisional Performance Evaluation

25 Measuring divisional profitability

Functional and divisionalized organizational structure

Profit centres and investment centres

Advantages of divisionalization

Disadvantages of divisionalization

Prerequisites for successful divisionalization

Distinguishing between the managerial and economic performance of the division

Alternative divisional profit measures

Return on investment

Residual income

Determining which assets should be included in the investment base

The impact of inflation

The impact of depreciation

The effect of performance measurement on capital investment decisions

Determining the divisional cost of capital

Use of non-accounting measures

Self-assessment question

Summary

Key terms and concepts

Recommended reading

References and further reading

Appendix 25.1: Reconciling short- and long-term residual income measures

Key examination points

Questions

26 Transfer pricing in divisionalized companies

Objectives of transfer pricing

Market prices

Setting transfer prices when there is no market for the intermediate product

Imperfect market for the intermediate product

Effect of cost-plus transfer prices

The use of linear programming in establishing optimum transfer prices

Transfer pricing conflicts

Resolving transfer price conflicts

Negotiated transfer prices

International transfer pricing

Transfer pricing recommendations

Surveys of company practice

Self-assessment question

Summary

Key terms and concepts

Recommended reading

References and further reading

<<管理与成本会计>>

Appendix 26.1: Economic analysis of transfer pricing

Key examination points

Questions

Part Eight: Past, Current and Future Developments in Management Accounting

27 Past, current and future developments in management accounting

practice

The history of management accounting

Management accounting research

The gap between theory and practice

Criticisms of management accounting practice

The future of management accounting

Summary

Key terms and concepts

Recommended reading

References and further reading

Appendices

Appendix A: Present value factors

Appendix B: Cumulative present value factors

Appendix C: Areas in tail of the normal distribution

Appendix D: Capital recovery factors (equal annuity rate)

Appendix E: Future value of £1 at the end of n periods

Notes

Answers to Self-Assessment Questions
