

<<分子材料的单晶体中子衍射SINGLE>>

图书基本信息

书名：<<分子材料的单晶体中子衍射SINGLE CRYSTAL NEUTRON DIFFRACTION FROM MOLECULAR MATERIALS>>

13位ISBN编号：9789810237769

10位ISBN编号：9810237766

出版时间：2000-12

出版时间：东南大学出版社

作者：Wilson, Chick C.

页数：370

内容概要

This important book presents a comprehensive account of the techniques and applications of single crystal neutron diffraction in the area of chemical crystallography and molecular structure. Beginning with a brief description of the general principles and the reasons for choosing the technique -- the "why" -- the book covers the methods for both the production of neutrons and the measurement of their scattering by molecular crystals -- the "how" -- followed by a detailed survey of past, present and future applications -- the "what". The coverage of both steady state and pulsed neutron sources and instrumentation is extensive, while the survey of applications is the most comprehensive yet undertaken. The book endeavours to show why the technique is an essential method for studying areas as diverse as hydrogen bonding and weak interactions, organometallics, supramolecular chemistry and crystal engineering, metal hydrides, charge density and pharmaceuticals. It is an ideal reference source for the research worker interested in using neutron diffraction to study the structure of molecules.

书籍目录

Foreword Acknowledgements Crystallography and the Importance of Structural Information 1.1 Single crystal diffraction - the basics 1.1.1 The crystal 1.1.2 The diffraction pattern 1.1.3 Measuring the diffraction pattern 1.1.4 Defining the molecular structure 1.2 Thermal motion and disorder in crystallography 1.2.1 Good crystallographic order 1.2.2 Thermal vibrational disorder 1.2.3 Static disorder 1.2.4 Thermal parameters and their chemical and physical importance 1.3 Chemical information from neutron crystallography 1.3.1 Examples 1.3.2 Areas of impact 1.3.3 Hydrogen bonding interactions 1.4 Biology - structure and function 1.5 Practical aspects of single crystal neutron diffraction experiments 1.5.1 Obtaining the sample 1.5.2 Collecting the data 1.5.3 Data resolution - desired and accessible 1.5.4 Solving the structure 1.5.5 Completing the structure - Fourier maps 1.5.6 Refining the structure 1.6 Summary 1.7 References 2 Neutron Scattering 2.1 Neutrons and their characteristics 2.2 Neutron production 2.2.1 The development of reactor sources 2.2.2 The development of spallation sources 2.3 The characteristics of neutron sources 2.3.1 Reactor sources 2.3.2 Spallation sources 2.3.3 Moderation 2.4 Two neutron sources 2.4.1 The ILL reactor source 2.4.2 The ISIS pulsed spallation neutron source 2.5 Neutron detection 2.5.1 Gas detectors 2.5.2 Scintillator detectors 2.5.3 Area neutron detectors 2.5.4 Image plates and Charge Coupled Devices (CCDs) 2.6 The complementarity of X-rays and neutrons in single crystal diffraction 2.6.1 Joint X-ray and neutron methods 2.6.2 Joint X+N refinements 2.6.3 The accuracy of X-ray and neutron determinations 2.6.4 Improving joint determinations: non-spherical X-ray formfactors 2.6.5 Multipole refinement of X-ray data 2.6.6 Requirements for successful studies using both X-ray and neutron data 2.7 Other methods in neutron scattering 2.8 References 3 Techniques for Single Crystal Neutron Diffraction 3.1 Single crystal diffractometers 3.1.1 Basic principles of single crystal diffractometers. 3.1.2 Automatic diffractometry 3.2 Data collection and intensity extraction 3.2.1 Basic procedures for single crystal data collection 3.2.2 Choice of scans for data collection 3.2.3 Peak Integration 3.2.4 Over-determination of data sets 3.3 Data reduction and correction 3.3.1 Normalisation 3.3.2 Absorption corrections 4 Review of Applications :the accurate Location of Atoms 5 Review of Applications :Hydrogen Bonding and other 6 Review of Applications :Probing Vibrations and Disorder 7 Impact on Material properties and Design 8 The Future: New Instruments, New sources, New Techniques, New science Appendix .Absorption coefficients used in single crystal neutron diffraction experiments Appendix .Analyses of the librations of terminal groups Index
