书籍目录

Preface
 Convergence of Generalized Singular Integrals to the Unit, Multivariate Case
 Two Contemporary Computational Concepts in Numerical Analysis
 Linear Integral Operators with Homogeneous Kernel: Approximation Properties in Modular Spaces. Applications to Mellin-type Convolution Operators and to Some Classes of Fractional Operators
 On the Simultaneous Approximation of Functions and Their Derivatives
 On the Computation of Minimal Projections: Millennium Report
 Copositive Polynomial Approximation Revisited
 Neuro-Fuzzy Adaptive Control: Structure, Algorithms, and Performance
 Sampling Theory and Function Spaces
 Computational Issues in Stable Financial Modeling
 Performance Measurements: The Stable Paretian Approach
 Evaluating Statistical Functionals by Means of Projections onto Convex Cones in Hilbert Spaces: Part I & II
 Dynamical Systems and Discrete Methods for Solving Nonlinear Ill-Posed Problems
 Extrapolation: From Calculation of $7r$ to Finite Element Method of Partial Differential Equations
 A Survey on Scaling Function Interpolation and Approximation
 List of Contributors
