

<<细胞的自控：离散的宇宙CELLULA>>

图书基本信息

书名：<<细胞的自控：离散的宇宙CELLULAR AUTOMATA: A DISCRETE UNIVERSE>>

13位ISBN编号：9789812381835

10位ISBN编号：981238183X

出版时间：2002-12

出版时间：Aspen Publishers

作者：Ilachinski,Andrew

页数：808

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

内容概要

CELLULAR AUTOMATA Discrete Universe by Andrew Ilachinski (Center for Naval Analyses, USA) Cellular automata are a class of spatially and temporally discrete mathematical systems characterized by local interaction and synchronous dynamical evolution. Introduced by the mathematician John von Neumann in the 1950s as simple models of biological self-reproduction, they are prototypical models for complex systems and processes consisting of a large number of simple, homogeneous, locally interacting components. Cellular automata have been the focus of great attention over the years because of their ability to generate a rich spectrum of very complex patterns of behavior out of sets of relatively simple underlying rules. Moreover, they appear to capture many essential features of complex self-organizing cooperative behavior observed in real systems. This book provides a summary of the basic properties of cellular automata, and explores in depth many important cellular-automata-related research areas, including artificial life, chaos, emergence, fractals, nonlinear dynamics, and self-organization. It also presents a broad review of the speculative proposition that cellular automata may eventually prove to be theoretical harbingers of a fundamentally new information-based, discrete physics. Designed to be accessible at the junior/senior undergraduate level and above, the book will be of interest to all students, researchers, and professionals wanting to learn about order, chaos, and the emergence of complexity. It contains an extensive bibliography and provides a listing of cellular automata resources available on the World Wide Web.

<<细胞的自控：离散的宇宙CELLULA>>

书籍目录

Acknowledgments Preface Foreword Chapter 1 Introduction: Preliminary Musings 1.1 Complex Systems
 1.1.1 Short History 1.2 Cellular Automata 1.2.1 CA & Computation 1.2.2 Why Study CA?
 1.2.2.1 CA as Powerful Computation Engines 1.2.2.2 CA as Discrete Dynamical System Simulators
 1.2.2.3 CA as Conceptual Vehicles for Exploring Pattern Formation 1.2.2.4 CA as Original Models
 of Fundamental Physics 1.2.3 Example #1: One-dimension M CA 1.2.4 Example #2: Conway's Life
 1.2.5 Example #3: Belousov-Zhabotinski Reaction 1.2.6 Example #4: Lattice Gases 1.2.7 Example #5:
 Collective Behavior in Higher Dimensions 1.2.8 Other Variants 1.3 Outline of Book Chapter 2 Formalism
 2.1 Mathematical Preliminaries 2.1.1 Set Theory 2.1.2 Information Theory 2.1.3 Graph Theory
 2.1.4 Groups, Rings and Fields 2.1.5 Abstract Automata 2.2 Dynamical Rules: Notation and Definitions
 2.2.1 One-dimensional CA 2.2.2 Two-dimensional CA Chapter 3 Phenomenological Studies of Generic
 CA 3.1 One-dimensional Systems 3.1.1 Space-Time Patterns 3.1.2 Behavioral Classes 3.1.2.1
 Difference Patterns 3.1.2.2 Blocking Transformations 3.1.3 General Properties of Elementary CA
 3.1.3.1 Local Properties 3.1.3.2 Global Properties 3.1.4 A Small Sampling of Rules
 3.1.4.1 The $k=2, r=1$ rule R22: Just How Complex Is It? 3.1.4.2 The $k=2, r=1$ rule R30: Just How Random
 Is It? 3.1.4.3 Critical-Like Behavior 3.1.4.4 Particle-Like Behavior 3.1.4.5 Reversible Rules
 3.2 Parameterizing the Space of CA Rules 3.2.1 Langton's Parameter 3.2.2 Qualitative Overview
 of Behavior as a Function of A 3.2.3 Quantitative Overview of Behavior as a Function of A 3.2.3.1
 Difference Pattern Spreading Rates 3.2.3.2 Entropy 3.2.4 Mutual Information 3.2.5 Discussion
 3.2.5.1 Large A Limit 3.2.5.2 Large k Limit 3.2.5.3 Complexity Resides in the
 Transition Region? 3.3 Dependence on Lattice Topology 3.3.1 Natural Topology 3.3.2 Transitional
 Lattice Construction 3.3.3 [2 : 2 : 2] Dynamical Profiles 3.3.4 [3 : 3 : 3] Dynamical Profiles 3.3.5
 Dynamical Profiles for Range Dependent Rules 3.3.6 Discussion 3.4 Two-dimensional Systems 3.4.1
 Simple Seeds 3.4.2 Random Seeds 3.4.3 Voting Rules Chapter 4 Dynamical Systems Theory
 Approach Chapter 5 Analytic Approach Chapter 6 Cellular Automata and Language Theory Chapter 7 Probabilistic
 CA Chapter 8 Generalized Models Chapter 9 CA Models of Fluid Dynamics Chapter 10 Neural Networks Chapter
 11 Artificial-Life Chapter 12 Is Nature, Underneath it All, a CA? Appendix A CA Research Tools Appendix B
 Complex Systems Theory Resources Bibliography Index
