

<<非平衡统计力学>>

图书基本信息

书名：<<非平衡统计力学>>

13位ISBN编号：9789812383785

10位ISBN编号：9812383786

出版时间：2003-12

出版时间：World Scientific Publishing Co Pte Ltd

作者：Chen, Tian-Quan

页数：420

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<非平衡统计力学>>

内容概要

This book presents the construction of an asymptotic technique for solving the Liouville equation, which is to some degree an analogue of the Enskog – Chapman technique for solving the Boltzmann equation. Because the assumption of molecular chaos has been given up at the outset, the macroscopic variables at a point, defined as arithmetic means of the corresponding microscopic variables inside a small neighborhood of the point, are random in general. They are the best candidates for the macroscopic variables for turbulent flows. The outcome of the asymptotic technique for the Liouville equation reveals some new terms showing the intricate interactions between the velocities and the internal energies of the turbulent fluid flows, which have been lost in the classical theory of BBGKY hierarchy.
